additive migration from plastics into food

In most cases, however, there is unwanted migration and release of additives, such as plasticizers from plastic products (e.g. from a PVC toy or shower curtain) or the migration and release of flame retardants (e.g. from plastic casings of televisions or computers).

An overview of chemical additives present in plastics ...

Plastic additives also reduce the scission and cross linking of macromolecular chains caused by thermo oxidative deterioration (Dilettato and others 1991). Unreacted monomers and oligomers may also migrate from plastics to foods. Table 5 shows some chemical substances that may migrate from plastics to foods. The restriction has also been applied to the SML for some metals and primary aromatic amines migrating from plastic packages into food (EU 10/2011).
