maternal death due to general anesthesia may be at least double the death rate from regional anesthesia. The primary cause of maternal death from general anesthesia is a difficulty with airway management. The greatest concern for the baby is the decrease in uterine blood flow and neonatal depression.

Anesthesia for fetal surgery. Fetal surgery pushes the limits of knowledge and therapy beyond conventional paradigms by treating the developing fetus as a patient. Providing anesthesia for fetal surgery is challenging for many reasons. It requires integration of both obstetric and pediatric anesthesia practice.
