"The South Pole discovered" trumpeted the front page of The Daily Chronicle on March 8, 1912, marking Roald Amundsen's triumph over the tragic Robert Scott. Yet behind all the headlines there was a much bigger story. Antarctica was awash with expeditions. In 1912, five separate teams representing the old and new world were diligently embarking on scientific exploration beyond the edge of the known planet. Their discoveries not only enthralled the world, but changed our understanding of the planet forever. Tales of endurance, selfsacrifice, and technological innovation laid the foundations for modern scientific exploration, and inspired future generations. To celebrate the centenary of this groundbreaking work, 1912: The Year the World Discovered Antarctica revisits the exploits of these different expeditions. Looking beyond the personalities and drawing on his own polar experience, Chris Turney shows how their discoveries marked the dawn of a new age in our understanding of the natural world. He makes use of original and exclusive unpublished archival material and weaves in the latest scientific findings to show how we might reawaken the public's passion for discovery and exploration

Everyone likes maps and maps are always used to illustrate the many books on the Antarctic. Gavin Francis fulfilled a lifetime's ambition when he spent fourteen months as the basecamp doctor at Halley, a profoundly isolated British research station on the Caird Coast of Antarctica. So remote, it is said to be easier to evacuate a casualty from the International Space Station than it is to bring someone out of Halley in winter. Antarctica offered a year of unparalleled silence and solitude, with few distractions and a very little human history, but also a rare opportunity to live among emperor penguins, the only species truly at home in he Antarctic. Following Penguins throughout the year ☺ from a summer of perpetual sunshine to months of winter darkness ☺ Gavin Francis explores the world of great beauty conjured from the simplest of elements, the hardship of living at 50 c below zero and the unexpected comfort that the penguin community bring. Empire Antarctica is the story of one man and his fascination with the world's loneliest continent, as well as the emperor penguins who weather the winter with him. Combining an evocative narrative with a sublime sensitivity to the natural world, this is travel writing at its very best

In Deep Freeze, Dian Olson Belanger tells the story of the pioneers who built viable communities, made vital scientific discoveries, and established Antarctica as a continent dedicated to peace and the pursuit of science, decades after the first explorers planted flags in the ice. In the tense 1950s, even as the world was locked in the Cold War, U.S. scientists, maintained by the Navy's Operation Deep Freeze, came together in Antarctica with counterparts from eleven other countries to participate in the International Geophysical Year (IGY). On July 1, 1957, they began systematic, simultaneous scientific observations of the south-polar ice and atmosphere. Their collaborative success over eighteen months inspired the Antarctic Treaty of 1959, which formalized their peaceful pursuit of scientific knowledge. Still building on the achievements of the individuals and distrustful nations thrown together by the IGY from mutually wary military, scientific, and political cultures, science prospers today and peace endures. The year 2007 marked the fiftieth anniversary of the IGY and the commencement of a new International Polar Year - a compelling moment to review what a singular enterprise accomplished in a troubled time. Belanger draws from interviews, diaries, memoirs, and official records to weave together the first thorough study of the dawn of Antarctica's scientific age. Deep Freeze offers absorbing reading for those who have ventured onto Antarctic ice and those who dream of it, as well as historians, scientists, and policy makers

Featuring a rogue group of cheeky animals who love nothing more than a challenge and a flustered, helpless narrator, this meta-leaning and hilarious picture book about animal habitats on every continent will have kids (and their adults!) laughing every time they pick it up. Turtles are found on every continent EXCEPT Antarctica. But not for long! When a David Attenborough-esque narrator explains that turtles are found everywhere except Antarctica, one determined turtle sets out to prove him wrong. After recruiting other non-Antarctic animals along the waymuch to the narrator's dismaythe turtle and his adventurous friends travel through fields, forests, and cross an entire ocean to reach their goal. But what exactly do they do once they get there? Perfect for anyone who's ever gone a little too far to prove a point, this nature-documentary-gone-wrong is a gleefully funny lesson in determination and the beauty of having a contingency plan

In August 1897 young Belgian commandant Adrien de Gerlache set sail for a three-year expedition aboard the good ship Belgica with dreams of glory. His destination was the uncharted end of the earth: the icy continent of Antarctica. After a series of costly setbacks the commandant faced two bad options: turn back in defeat and spare his men the devastating Antarctic winter, or recklessly chase fame by sailing deeper into the freezing waters. Sanction tells the harrowing true survival story of an expedition that went terribly awry, of the ship stuck fast in the icy hold of the Bellingshausen Sea, the crew trapped inside for the entire sunless, Antarctic winter. -- adapted from jacket
