Avian Influenza | Wiley Online Books

Avian influenza viruses survive in bird faeces and secretions for up to 4 weeks, depending on virus type, waste type, temperature and other environmental conditions. Influenza viruses can be inactivated by disinfectants, such as those containing chlorine or hypochlorite, or alcohols, and destroyed by temperatures above 70 °C.

WHO/Europe | Virology of human influenza

Avian influenza (AI) is a viral disease caused by influenza A viruses (IAVs) that affects the respiratory, digestive, and nervous systems of several bird species, including domestic poultry and wild aquatic birds. The World Organization for Animal Health (OIE) has included highly pathogenic avian influenza (HPAI) as a List A notifiable disease.

---

Avian Virology: Current Research and Future Trends

Avian influenza, known informally as avian flu or bird flu, is a variety of influenza caused by viruses adapted to birds. The type with the greatest risk is highly pathogenic avian influenza (HPAI).

Avian Influenza (Monographs in Virology, Vol. 27): Klenk ...

Abstract In May 2016, a highly pathogenic avian influenza A (H5N8) virus strain caused deaths among 3 species of wild migratory birds in Qinghai Lake, China. Genetic analysis showed that the novel reassortant virus belongs to group B H5N8 viruses and that the reassortment events likely occurred in early 2016.

Highly Pathogenic Avian Influenza A(H5N8) Virus in Wild ...

To step up vigilance and improve pandemic preparedness, this article elucidates the virology, epidemiology, pathogenesis, clinical characteristics, and treatment of human infections by influenza A viruses, with an emphasis on the influenza A (H1N1)pdm09, H5N1, and H7N9 subtypes. Keywords: Avian influenza A viruses; Clinical characteristics; Epidemiology; Pandemic influenza virus; Treatment; Virology.

---

Pandemic and Avian Influenza A Viruses in Humans ...

All pandemic influenza viruses in humans originated from avian influenza viruses. Understanding how an avian virus can become a pandemic virus that causes devastating effects on human health is critical. This book is a valuable reference for scientists and public health specialists who work in either animal health or human health.

---

Avian Influenza

Avian influenza virus (AIV) is an important public health issue because pandemic influenza viruses in people have contained genes from viruses that infect birds. The H5 and H7 AIV subtypes have periodically mutated from low pathogenicity to high pathogenicity form.

---

Mapping the risk of avian influenza in wild birds in the US

Bird flu or avian influenza (AI) is a collective term for different influenza viruses that may be dangerous to poultry. Especially chickens, turkeys, waterfowl, waders, beach birds, ratites and starlings are susceptible to avian influenza, with possible lethal consequences. Avian influenza has two variants: a mild and a hazardous variant.

Avian influenza: bird flu and avian flu - WUR

The Avian Influenza Virus (AIV) group uses a wide range of biological and biotechnological approaches in animal virology, molecular biology, protein biochemistry, immunology, vaccinology and diagnostics to improve control measures against avian influenza viruses affecting poultry and human health. Our aims

---

Avian Influenza | The Pirbright Institute

Avian influenza (AI) is a highly contagious viral disease affecting several species of food producing birds (chickens, turkeys, quails, guinea fowl, etc.), as well as pet birds and wild birds. Occasionally mammals, including humans, may contract avian influenza.

Avian Influenza Portal: OIE - World Organisation for ...

The strain of avian influenza virus responsible for the outbreak, of the H10N7 subtype, first caused viral infections in harbor and gray seals along the coast of western Sweden and eastern Denmark...

A 2014 seal flu illustrates how avian flu viruses can ...

In poultry, influenza A viruses are divided into two types based on their pathogenicity: low pathogenic avian influenza (LPAI) and highly pathogenic avian influenza (HPAI). LPAI causes no or little signs of disease (e.g. decreased egg production). HPAI causes very high mortality rates in chickens.
