23.4 Leaves Lesson Objectives Describe how the structure of a leaf enables it to carry out photosynthesis. Explain how gas exchange in leaves relates to homeostasis. Lesson Summary Leaf Structure and Function The structure of a leaf is optimized to absorb light and carry out photosynthesis.

*23.4 Leaves - Biology*

Leaves are made up of the three tissue systems. • Leaves are covered on their top and bottom surfaces by epidermis. The epidermis of nearly all leaves is covered by a waxy cuticle, which protects tissues and limits water loss. • The vascular tissues of leaves are connected directly to the vascular tissues of stems.
