Canon 50mm 14 Manual Focus

A real veteran in Canon ' s line-up, the Canon EF 50mm f/1.4 USM lens is 25 years old. It ' s only about half the physical length of competing Sigma and Zeiss 50mm lenses, and just a third of the weight. That ' s naturally a good thing for all of us who don ' t like being weighed down by big, heavy lenses.

Hello. I recently got an EF 50mm 1.8 lens for my EOS 60D. The automatic focus appears to be fine but turning the focus ring while in manual does not change focus at all. I've made sure that the lens is set to "MF" and I can see "M FOCUS" on my top display. I tried the lens on another camera and it behaves the same way.

The wide f/1.8 aperture of the EF 50mm f/1.8 STM gives you the ability to bring your subject into sharp focus and blur the background. Photographers refer to this as a ' narrow depth of field ' and makes your subject stand out which is great for portraits, as people become the clear focus of your shot. Let more light in
