~~What is Dialysis and Chronic Kidney Disease?~~

~~— Dialysis — . . .~~

In some cases of acute kidney failure, dialysis may only be needed for a short time until the kidneys get better. In chronic or end stage kidney failure, your kidneys do not get better and you will need dialysis for the rest of your life. If your doctor says you are a candidate, you may choose to be placed on a waiting list for a new kidney.

~~Chronic Kidney Disease, Dialysis, and Transplantation ...~~

Chronic kidney disease (CKD) usually means

Access Free Chronic Kidney Disease Dialysis And Transplantation A Companion

that your kidneys do not work in the normal way. The kidneys then can't remove waste products from your body. Damage to the filter system can also allow blood and protein to leak into the urine. However the vast majority of people with CKD have no symptoms and do not need any specialist input.

~~Chronic kidney disease (CKD) | Kidney Care UK~~

CKD stage 5 is e GFR less than 15 ml/min, established kidney failure, when dialysis or a kidney transplant may be needed.

Proteinuria. Leakage of protein into the urine increases the risk of any kidney

An alternative to dialysis for people with severely reduced kidney function is a kidney transplant. This is often the most effective treatment for advanced kidney disease, but it involves major surgery and taking medicines (immunosuppressants) for the rest of your life to stop your body attacking the donor

Many people with chronic kidney disease (CKD) are able to live long lives without being unduly affected by the condition. Although it's not possible to repair damage that has already happened to your kidneys, CKD will not necessarily get worse. CKD only reaches an advanced stage in a small proportion of people.
