Originally presented as author's Ph.D. dissertation, Princeton University, 1983.

Publishing Addiction Science is a comprehensive guide for addiction scientists facing the complex process of contributing to scholarly journals. Written by an international group of addiction journal editors and their colleagues, it discusses how to write research articles and systematic reviews, choose a journal, respond to reviewers' reports, become a reviewer, and resolve the often difficult authorship, ethical and citation issues that arise in addiction science publishing. As a "Guide for the Perplexed," Publishing Addiction Science helps novice as well as experienced researchers to deal with these challenges. It is suitable for university courses and forms the basis of the training workshops offered by the International Society of Addiction Journal Editors (ISAJE). Co-sponsored by ISAJE and the scientific journal Addiction, the third edition of Publishing Addiction Science gives special attention to the challenges faced by researchers from developing and non-English-speaking countries and features new chapters on guidance for clinician-scientists and the growth of infrastructure and career opportunities in addiction science.

This electronic version has been made available under a Creative Commons (BY-NC) open access license. Loud and proud is an ethnographic study of grassroots activists in the English Defence League (EDL). Setting the findings within contemporary debates on race and racism, Islamophobia, social movements and the far right, the author draws on interviews, informal conversations and extensive observation at EDL events to explore and explain the gap between the public image of the movement as a violent Islamophobic and racist organisation and individual activists' understanding of it as 'one big family'. Presenting them neither as duped by a charismatic leader nor working class anti-heroes, this book introduces EDL activists as individuals with real lives whose diverse trajectories in and out of activism are embedded in personal life stories. The book will be of value to those researching or studying in the disciplines of sociology, political science and anthropology as well as those with an interest in contemporary political issues and the populist and radical right.

Christians disagree on doctrine, politics, church government, certain moral questions—just about everything under the sun, it can seem. Yet a unity remains, centered around a core outlook on God and the world that is common to all believers. Or at least, such an outlook should unite Christians of all theological and church backgrounds. However, alternate visions of reality often infect and corrupt Christians' thinking. In *The Essentials of Christian Thought*, eminent theologian and church historian Roger Olson outlines the basic perspective on the world that all Christians, regardless of the place and time in which they are born, have historically held. This underlying metaphysic accords with all orthodox theologies, whether Calvinist or Arminian, Roman Catholic, Eastern Orthodox, or Protestant, but it separates Christianity from other religious and secular perspectives. It is, quite simply, the essential requirement of a Christian view of the world. Bold and incisive, *The Essentials of Christian Thought* will prompt thoughtful readers and students to more consciously appropriate the core of their faith, guarding against ideas that subtly but necessarily invite compromise.

In what ways are cities central to the evolution of contemporary global capitalism? And in what ways is global capitalism forged by the urban experience? This book provides a response to these questions, exploring the multifaceted dimensions of the city-capitalism nexus. Drawing on a wide range of conceptual approaches, including political economy, neo-institutionalism and radical political theory, this insightful book examines the complex relationships between contemporary capitalist cities and key forces of our times, such as globalization and neoliberalism. Taking a truly global perspective, Ugo Rossi offers a comparative analysis of the ways in which urban economies and societies reflect and at the same time act as engines of global capitalism. Ultimately, this book shows how over the past three decades capitalism has shifted a gear - no longer merely incorporating key aspects of society into its system, but encompassing everything, including life itself - and illustrates how cities play a central role within this life-oriented construction of global capitalism.

Are painkillers mundane medications safe for use to ease human suffering? Or are they drugs of abuse that cause addiction and death? Do they ameliorate pain, or do they cause it? This book explores growing interest among medical practitioners media outlets about the 'misuse' or 'abuse' of pharmaceutical pain medications. It contextualizes these emerging discourses of pharmaceutical 'abuse' within the social and political histories from which they have emerged by exploring the role of pleasure and pain in shaping individualized modes of medication consumption in a neoliberal age of anxiety. The book is divided into two parts: the first addresses the discursive construction of painkiller (ab)use as articulated in research and policy accounts; the second part provides an empirical investigation that draws on the lived experience of those who engage in non-medical consumption. This book argues that, contrary to the stereotype of the 'seductive' drug that coaxes its user into a life of dysfunction, there appears to be an intimate relationship between the motivations of pleasure seeking, health practice and productive citizenship among people who use painkillers for non-medical reasons.

A Comissão Organizadora da I Jornada Discente do Programa de Pós-Graduação em Ciência Política da Universidade Federal do Estado do Rio de Janeiro (PPGCP-UNIRIO) tem o prazer de apresentar a coletânea "Como Chegamos ao Contexto Atual? - Dilemas e Perspectivas sobre Ciência Política e Relações Internacionais", composto por trabalhos em destaque que foram apresentados durante o evento. Dividido em 4 seções, o livro tem o intuito de discutir o passado, o presente e o futuro dos estudos de Ciência Política e Relações Internacionais, em busca de um debate democrático e inclusivo sobre os desafios que permeiam os campos de conhecimento para a produção de um saber mais representativo. Inicia Via Editora

Over the last twenty-five years, garbage infrastructure in Dakar, Senegal, has taken center stage in the struggles over government, the value of labor, and the dignity of the working poor. Through strikes and public dumping, Dakar's streets have been periodically inundated with household garbage as the city's trash collectors and ordinary residents protest urban austerity. Often drawing on discourses of Islamic piety, garbage activists have provided a powerful language to critique a neoliberal mode of governing-through-disposability and assert rights to fair labor. In *Garbage Citizenship* Rosalind Fredericks traces Dakar's volatile trash politics to recalibrate how we understand urban infrastructure by emphasizing its material, social, and affective elements. She shows how labor is a key component of infrastructural systems and how Dakar's residents use infrastructures as a vital tool for forging collective identities and mobilizing political action. Fleshing out the materiality of trash and degraded labor, Fredericks illuminates the myriad ways waste can be a potent tool of urban control and rebellion.

How society's undervaluing of life puts all of us at risk—and the groundbreaking economic measure that can fix it Like it or not, sometimes we need to put a monetary value on people's lives. In the past, government agencies used the financial "cost of death" to monetize the mortality risks of regulatory policies, but this method vastly undervalued life. Pricing Lives tells the story of how the government came to adopt an altogether different approach—the value of a statistical life, or VSL—and persuasively shows how its more widespread use could create a safer and more equitable society for everyone. In the 1980s, W. Rip Viscusi used the method to demonstrate that the benefits of requiring businesses to label hazardous chemicals immensely outweighed the costs. VSL is the risk-reward trade-off that people make about their health when considering risky job choices. With it, Viscusi calculated how much more money workers would demand to take on hazardous jobs, boosting calculated benefits by an order of magnitude. His current estimate of the value of a statistical life is \$10 million. In this book, Viscusi provides a comprehensive look at all aspects of economic and policy efforts to price lives, including controversial topics such as whether older people's lives are worth less and richer people's lives are worth more. He explains why corporations need to abandon the misguided cost-of-death approach, how the courts can profit from increased application of VSL in assessing liability and setting damages, and how other countries consistently undervalue risks to life. Pricing Lives proposes sensible economic guideposts to foster more protective policies and greater levels of safety in the United States and throughout the world.
