Today, our cities are an embodiment of the complex, historical evolution of knowledge, desires and technology. Our planned and designed activities co-evolve with our aspirations, mediated by the existing technologies and social structures. The city represents the accretion and accumulation of successive layers of collective activity, structuring and being structured by other, increasingly distant cities, reaching now right around the globe.

The Origins of Complexity Theory in Cities and Planning ...

From a complexity theory perspective then, cities have the following characteristics, and are connected at multiple scales; that is at local community, as well as at a regional, national, and international level. That connection is both internal within each level, but also between the different levels or scales.

URBAN GOVERNANCE: A COMPLEXITY THEORY APPROACH - LSE Cities

We note that the development of collaborative planning theories that see planning as dialogue between conflicting actors is in turn being influenced by conceptions of complexity. In particular, we argue that this shift from static to dynamic, top-down to bottom-up, is problematic for traditional notions of the optimum city which is inevitably an equilibrium to be aspired to.
