This issue of Clinics in Podiatric Medicine and Surgery will take a unique look at some of the top research currently underway across many of the top schools of Podiatric Medicine and Surgery in the United States. The issue will be edited by our series Consulting Editor, Dr. Thomas Chang, and will feature review articles from physicians at the following 9 Institutions: Des Moines University College of Podiatric Medicine and Surgery; Arizona School of Podiatric Medicine; Temple University School of Podiatric Medicine; Samuel Merritt – California School of Podiatric Medicine; Kent State University College of Podiatric Medicine; New York College of Podiatric Medicine; Dr. William M. Scholl College of Podiatric Medicine; Barry University School of Podiatric Medicine; Western University College of Podiatric Medicine. Topics covered in the issue include: Mechanics of the Jones Fracture; 3D Printing for Foot and Ankle Surgical Planning and Research; Orthoplastic Approach for Diabetic Foot Salvage; Multi drug resistant organisms with new technology; Motion Analysis is being used to advance podiatric biomechanics; Gene Expression in post op pain and Charcot; Primary Deltoid Repair in Rotational Ankle Injuries; The Impact of Vitamin D Levels in Foot and Ankle Surgery; Plantar Verrucae in HIV Infection; The role of the podiatrist in assessing and reducing fall risk: Offloading for the Diabetic Foot - Considerations and Implications; Efficanazole use in the diabetic population study; The use of Virtual Reality in Podiatric Education; among others.

Forensic Gait Analysis examines the inter-section of podiatric medicine with forensic investigation—that which links or dissociates a suspect to a crime through analysis of their gait, that is their movement—how an individual walks, runs, and bends. This book provides a concise explanation of how an individual's gait and biomechanics are forensically analysed and compared, using video imagery in the process of human identification and investigations. Along with the presentation and delivery of material with case law references illustrating the use of expert evidence. Gait analysis is a long-standing component of the diagnostic and therapeutic tool set of medical disciplines, although the knowledge goes back much further. The area has also captured the interest of technology engineers and others, as the development and use of forensic gait analysis as an investigative and evidential device continues to widen. Features: • Presents succinct knowledge on forensic gait analysis. • 100+ illustrations with photographs and diagrams; over 850 references. • Considers the technical and scientific basis of the field including, the history of gait, musculoskeletal, neurology, emotions and gait, forensic statistics, photogrammetry, and recognises the trajectory of development into IT and software solutions. • Coverage on CCTV imagery and other video footage for use in the process of identification and investigations. • Details are provided on report writing and giving expert evidence in the legal systems. • Contributors across all subject areas. This definitive fully referenced text on Forensic Gait Analysis is a welcome publication for healthcare professionals, lawyers, counsel, investigators, forensic practitioners, and students wishing to know more on the subject and this growing domain.

Present Your Research to the World! The World Congress 2009 on Medical Physics and Biomedical Engineering – the triennial scientific meeting of the IUPESM - is the world's leading forum for presenting the results of current scientific work in health-related physics and technologies to an international audience. With more than 2,800 presentations it will be the biggest conference in the fields of Medical Physics and Biomedical Engineering in 2009! Medical physics, biomedical engineering and bioengineering have been driving forces of innovation and progress in medicine and healthcare over the past two decades. As new key technologies arise with significant potential to open new options in diagnostics and therapeutics, it is a multidisciplinary task to evaluate their benefit for medicine and healthcare with respect to the quality of performance and therapeutic output. Covering key aspects such as information and communication technologies, micro- and nanosystems, optics and biotechnology, the congress will serve as an inter- and multidisciplinary platform that brings together people from basic research, R&D, industry and medical application to discuss these issues. As a major event for science, medicine and technology the congress provides a comprehensive overview and in-depth, first-hand information on new developments, advanced technologies and current and future applications. With this Final Program we would like to give you an overview of the dimension of the congress and invite you to join us in Munich! Olaf Düssel Congress President Wolfgang C.
