on how particular forms of cultural knowledge and expertise work on, order and transform society. Examining these forms of culture's action on the social as aspects of a historically distinctive ensemble of cultural institutions, it considers the diverse ways in which culture has been produced and mobilised as a resource for governing populations. These concerns are illustrated in detailed case studies of how anthropological conceptions of the relations between race and culture have shaped - and been shaped by - the relationships between museums, fieldwork and

governmental programmes in early twentieth-century France and Australia. These are complemented by a closely argued account of the relations between aesthetics and governance that, in contrast to conventional approaches, interprets the historical emergence of the autonomy of the aesthetic as vastly expanding the range of art's social uses. In pursuing these concerns, particular attention is given to the role that the cultural disciplines have played in making up and distributing the freedoms through which modern forms of liberal government operate. An

shaping activities has been increasingly associated with the developing field of cultural policy studies. The Cultural Policy Review of Books offers a fascinating insight into the intellectual formation of many of the leading figures that have contributed to this field. Invited to write a short review essay on the book that had most influenced their thinking, 41 academics and researchers from around the world reveal what they consider to be essential reading. Including essays on Bourdieu, de Certeau, Foucault, Gramsci, Habermas, and Williams, as well as many lesser known

Russian Formalism and Marxist criticism had a seismic impact on twentieth-century literary theory and the shockwaves are still felt today. First published in 1979, Tony Bennett's *Formalism and Marxism* created its own reverberations by offering a

ground-breaking new interpretation of the Formalists' achievements and demanding a new way forward in Marxist criticism. The author first introduces and reviews the work of the Russian Formalists, a group of theorists who made an extraordinarily vital contribution to literary criticism in the decade following the October Revolution of 1917. Placing the work of key figures in context and addressing such issues as aesthetics, linguistics and the category of literature, literary form and function and literary evolution, Bennett argues that the Formalists'

concerns provided the basis for a radically historical approach to the study of literature. Bennett then turns to the situation of Marxist criticism and sketches the risks it has run in becoming overly entangled with the concerns of traditional aesthetics. He forcefully argues that through a serious and sympathetic reassessment of the Formalists and their historical approach, Marxist critics might find their way back on to the terrain of politics, where they and their work belong. Addressing such crucial questions as 'What is literature?' or 'How should

it be studied and to what end?', Formalism and Marxism explores ideas which should be considered by any student or reader of literature and provides a particular challenge to those interested in Marxist criticism. Now with a new afterword, this classic text still offers the best available starting point for those new to the field, as well as representing a crucial intervention in twentieth-century literary theory.

social sciences and humanities. It does so by exploring new understandings of how power is made up and exercised by examining the role of material infrastructures in the organization of state power and the role of material cultural practices in the organization of colonial forms of governance. A diverse range of historical examples is drawn on in illustrating these concerns - from the role of territorial engineering projects in seventeenth-century France through the development of the postal system in nineteenth-century Britain to the relations

between the state and road-building in contemporary Peru, for example. The colonial contexts examined are similarly varied, ranging from the role of photographic practices in the constitution of colonial power in India and the measurement of the bodies of the colonized in French colonial practices to the part played by the relations between museums and expeditions in the organization of Australian forms of colonial rule. These specific concerns are connected to major critical re-examination of the limits of the earlier formulations of cultural materialism and

It has become increasingly evident that effective planning for sustainable communities, environments and economies pivots on the ability of planners to see the possibilities for culture in comprehensive social, historical and environmental terms and to more fully engage with the cultural practices, processes and theorisation that comprise a social formation. More broadly, an approach to planning theory and practice that is itself formed through a close engagement with culture is required. This Research Companion brings together leading experts from around

the world to map the contours of the relationship between planning and culture and to present these inextricably linked concepts and issues together in one place. By examining significant trends in varying national and international contexts, the contributors scrutinise the theories and practices of both planning and culture and explore not only their interface, but significant divergences and tensions. In doing so, this collection provides the first comprehensive overview and analysis of planning and culture, interdisciplinary and international in scope.

It is comprised of six parts organised around the themes of global and historical contexts, key dimensions of planning and cultural theory and practice, and cultural and planning dynamics. Each section includes a final chapter that provides a case study lens which pulls the themes of the section together with reference to a significant planning issue or initiative.

The Victorian period in Britain was an "age of reform." It is therefore not surprising that two of the era's most eminent intellectuals described themselves as reformers.

Both William Whewell and John Stuart Mill believed that by reforming philosophy—including the philosophy of science—they could effect social and political change. But their divergent visions of this societal transformation led to a sustained and spirited controversy that covered morality, politics, science, and economics. Situating their debate within the larger context of Victorian society and its concerns, *Reforming Philosophy* shows how two very different men captured the intellectual spirit of the day and engaged the attention of other scientists and

philosophers, including the young Charles Darwin. Mill—philosopher, political economist, and Parliamentarian—remains a canonical author of Anglo-American philosophy, while Whewell—Anglican cleric, scientist, and educator—is now often overlooked, though in his day he was renowned as an authority on science. Placing their teachings in their proper intellectual, cultural, and argumentative spheres, Laura Snyder revises the standard views of these two important Victorian figures, showing that both men's concerns remain relevant today. A philosophically and

activism can transform our everyday workplaces in contexts of considerable adversity. Personal essays by prominent scholars provide critical reflections on their institution-building triumphs and setbacks across a range of cultural institutions. Often adopting narrative approaches, the contributors examine how effective programmes and activities are built in varying local and national contexts within a common global regime of university management policy. Here they share experiences based on developing new undergraduate degrees, setting up research

This book also investigates the impact of managerialism, marketization and globalization on university cultures, asking what critical cultural scholarship can do in such increasingly adversarial conditions. Experiments in Asian universities are emphasized as exemplary of what can or could be achieved in other contexts of globalized university policy. Contributors include
