## **Dehumidification And Ventilation Calculation Sheet**

The proposed “ventilation load index” (VLI) is the load generated by one cubic foot per minute of fresh air brought from the weather to space-neutral conditions over the course of one year. It consists of two numbers, separating the load into dehumidification and cooling components: latent ton-hours per cfm per year + sensible ton-hours

**from ...**

Proceed with the following calculation:  $x = C \times \text{grs/hr} \ 60 \div (S - G)$  Where:  $x$  = cfm Delivery air rate from dryer to space  
 $\text{grs/hr}$  = total grains per hour in space  $C = 14$  = constant  $S = 46$  = Grs/lb moisture requirement of controlled space. In the absence of a ventilation requirement this would be the inlet condition at dryer.

## **Sizing the Dehumidifier - Dry Air**

In this article we are going to learn in brief how to do dehumidifier sizing of different kind of dehumidification units. In other word we are going to do moisture load calculation and accordingly select dehumidifiers. Here i like to mention that this article will explain dehumidifier calculation of

# Where To Download Dehumidification And Ventilation Calculation Sheet

refrigerant based dehumidifier only.

## **How to do dehumidifier calculation or sizing?**

Dehumidifiers Vs Whole House Ventilation. When it comes to signs of streaming windows or damp problems in our homes, our thoughts often turn to installing a dehumidifier, they're easy to pick up and put into your property but is that really problem solved? Arrange a Survey.
