Signs in a newborn baby The two main problems caused by rhesus disease in a newborn baby are haemolytic anaemia and jaundice. In some cases, the baby may also have low muscle tone (hypotonia) and they may be lacking in energy. If a baby has rhesus disease, they won't always have obvious symptoms when they're born.

### ~~Rhesus disease - Symptoms - NHS~~

Rhesus disease is a condition where antibodies in a pregnant woman's blood destroy her baby's blood cells. It's also known as haemolytic disease of the foetus and newborn (HDFN). Rhesus disease doesn't harm the mother, but it can cause the baby to become anaemic and develop jaundice. Read about the signs of rhesus disease in a baby.
