Video Lessons - More Examples Age Word Problems. Example: Mary is 3 times as old as her son. In 12 years, Mary's age will be one year less than twice her son's age. Find their ages now. Note that this problem requires a chart to organize the information. The rows of the chart can be labeled as Mary and Son, and the columns of the chart can be labeled as "age now" and "age in 12 years".

*Algebra: Age Problems (video lessons, examples and solutions)*

Example: Five years ago, John's age was half of the age he will be in 8 years. How old is he now? Solution: Step 1: Let  $x$  be John's age now. Look at the question and put the relevant expressions above it. Step 2: Write out the equation.  Isolate variable  $x$

*Age Word Problems (video lessons, examples and solutions)*

Example 1. Phil is Tom's father. Phil is 35 years old. Three years ago, Phil was four times as old as his son was then. How old is Tom now? First, circle what it is you must ultimately find— how old is Tom now? Therefore, let  $t$  be Tom's age now. Then three years ago, Tom's age would be  $t - 3$ . Four times Tom's age three years ago would be  $4(t - 3)$

## *Age Problems - CliffsNotes*

Age Problems. Age problems are a very popular type of algebra word problem. In age problems, you are given information so you can find the ages of the people in the problem. For this topic, you will need to know how to create equations with variables and solve for variables. Example 1: Solve the following age problems. Mike is 18 years old.

## *Age Problems Sample Problems - MathScore.com*

$x + 5 =$  age of the person 5 years from now or 5 years hence Note: The difference of the ages of two persons is constant at any time. If A = present age of Albert and B = present age of Bryan. Sum of their ages 4 years ago =  $(A - 4) + (B - 4)$  Sum of their ages 2 years hence =  $(A + 2) + (B + 2)$  Difference of their ages =  $A - B$  Example

Kevin is 4 years older than Margaret. Next year Kevin will be 2 times as old as Margaret. How old is Kevin? Solution Let be Kevin's present age. Then Margret's present age is . Next year Kevin will be years old, and Margaret will be years old.

## *Lesson Age problems and their solutions*

Let us go through some problems on ages (with solutions) to understand the concept and statements of ages in a better manner.

Example 1: The ratio of the present ages of Supriya and her mother is 2:9. The mother's age at the time of Supriya's birth was 28 years.

## *Problems on Ages Solved Examples with Solution - Hitbullseye*

Answer: Suppose that the present age of the son is =  $x$  years. Then the father's age is  $(60 - x)$  years. Notice that we are trying to reduce the problem into as few variables as possible. As per the second condition of the question, we have: The age of the father six years ago =  $(60 - x) - 6$  years =  $54 - x$  years.
