Geochemistry - an overview | ScienceDirect Topics
Geochemistry is fundamentally concerned with the occurrence and distribution of the chemical elements in the Earth, with stronger emphasis on processes occurring in the upper continental crust. Mineralogy involves the identification and characterization of minerals occurring in pure form or as solid-state mixtures in rocks.

Geochemistry - The University of Nottingham

Geochemists study the composition, structure, processes, and other physical aspects of the Earth. They examine the distribution of chemical elements in rocks and minerals, as well as the movement of these elements into soil and water systems. There is a wealth of information buried in the liquids, gases, and mineral deposits of rock.
