shows students how to apply traditional mathematical skills in real-world contexts.

The emphasis on skill building and applications engages students as they master algebraic concepts, problem solving, and communication skills. Students develop sound mathematical

skills by learning how to solve problems generated from realistic applications, instead of learning techniques without conceptual understanding.

Authors Mark Clark and Cynthia Anfinson have developed several key ideas to make concepts real and vivid for

students. First, the authors place an emphasis on developing strong algebra skills that support the applications, enhancing student comprehension and developing their problem solving abilities. Second, applications are integrated

throughout, drawing on realistic and numerically appropriate data to show students how to apply math and to understand why they need to know it.

These applications require students to think critically and develop the skills needed to explain and think about the
