Throughout the three years, three main areas are assessed: competence, experience and reflection. Competence: Core competencies in clinical psychology are those areas of activity that are considered by the BPS and our regulatory body, the Health & Care Professions Council (HCPC), to be central to our identity and role in the public services.

This three-volume handbook describes the core competency areas in providing psychological services relevant to practitioners as well as clinical researchers. It covers assessment and conceptualization of cases, the application of evidence-based methods, supervision, consultation, cross-cultural factors, and ethics.

In recent years there has been a tremendous growth in psychology as a field of study and in the number of students of clinical psychology in particular. The latter is partly due to the proliferation of professional schools of psychology that are devoted to practitioner-oriented degrees, rather than the traditional research-oriented course of study. Whatever school students emerge from, however, they are obliged to demonstrate proficiency in providing clinical services. This multi-volume handbook, is devoted to describing the core competency areas in providing psychological services which is relevant to practitioners as well as clinical researchers. As such, it covers assessment and conceptualization of cases, the application of evidence-based methods, supervision, consultation, cross-cultural factors, and ethics. The Handbook comprises three volumes with contributions by experts in each area. The goal is to provide detailed descriptions of competence levels and describe the developmental trajectory required to reach the highest of these levels. Each chapter in Volume I will follow a similar format including an overview, basic competencies, and expert competencies. This will facilitate easy comparison across chapters. All will be illustrated with case examples. Subsequent volumes will have a similarly structured format that will include maintenance factors, mechanisms of change, evidence-based treatment approaches, and a focus on the transition from basic skills to expert functioning. It is expected that the systematic presentation of skills will provide a gold standard against which to measure individual performance and in this regard will be valuable to students, instructors, and credentialing bodies.

Handbook of Multicultural Competencies in Counseling and Psychology is the first book to offer the theoretical background, practical knowledge, and training strategies needed to achieve multicultural competence. Focusing on a wide range of professional settings, editors Donald B. Pope-Davis, Hardin L.K. Coleman, William Ming Liu, and Rebecca L. Toporek provide a compendium of the latest research related to multicultural competency and the hands-on framework to develop specialized multicultural practices. An indispensable resource for psychologists, social workers, school counselors, and teachers, Handbook of Multicultural Competencies in Counseling and Psychology is also an ideal supplementary text for students in counseling and clinical practice courses.

Handbook of Clinical Psychology, Volume 1: Adults provides comprehensive coverage of the fundamentals of clinical psychological practice for adults from assessment through treatment, including the innovations of the past decade in ethics, cross cultural psychology, psychoneuroimmunology, cognitive behavioral treatment, psychopharmacology, and geropsychology.

Handbook of Clinical Psychology, Volume 2: Children and Adolescents provides comprehensive coverage of the fundamentals of clinical psychological practice for the young from assessment through treatment, including the innovations of the past decade in ethics, cross cultural psychology, psychoneuroimmunology, cognitive behavioral treatment, psychopharmacology, and pediatric psychology.

The exponential growth of clinical psychology since the late 1960s can be measured in part by the extensive—perhaps exhaustive—literature on the subject. This proliferation of writing has continued into the new century, and the field has come to be defined as much by its many topics as its many voices. The Oxford Handbook of Clinical Psychology synthesizes these decades of literature in one extraordinary volume. Comprising chapters from the foremost scholars in

clinical psychology, the handbook provides even and authoritative coverage of the research, practice, and policy factors that combine to form today's clinical psychology landscape. In addition to core sections on topics such as training, assessment, diagnosis, and intervention, the handbook includes valuable chapters devoted to new and emerging issues in the clinical field, including health care reforms, cultural factors, and technological innovations and challenges. Each chapter offers a review of the most pertinent literature, outlining current issues and identifying possibilities for future research. Featuring two chapters by Editor David H. Barlow -- one on changes during his own 40-year odyssey in the field, the other projecting ten themes for the future of clinical psychology -- The Oxford Handbook of Clinical Psychology is a landmark publication that is sure to serve as the field's benchmark reference publication for years to come. It is an essential resource for students, clinicians, and researchers across the ever-growing clinical psychology community.

Specialty Competencies in Couple and Family Psychology provides a comprehensive explanation of the competencies involved in the specialty and illustrates how complexity, reciprocity, interdependence, adaptation, and self-organization are important aspects of the epistemology of a couples and family approach.

Core Competencies of Relational Psychoanalysis provides a concise and clearly presented handbook for those who wish to study, practice, and teach the core competencies of Relational Psychoanalysis, offering primary skills in a straightforward and useable format. Roy E. Barsness offers his own research on technique and grounds these methods with superb contributions from several master clinicians, expanding the seven primary competencies: therapeutic intent, therapeutic stance/attitude; analytic listening/attunement; working within the relational dynamic, the use of patterning and linking; the importance of working through the inevitable enactments and ruptures inherent in the work; and the use of courageous speech through disciplined spontaneity. In addition, this book presents a history of Relational Psychoanalysis, offers a study on the efficacy of Relational Psychoanalysis, proposes a new relational ethic and attends to the the importance of self-care in working within the intensity of such a model. A critique of the model is offered, issues of race and culture and gender and sexuality are addressed, as well as current research on neurobiology and its impact in the development of the model. The reader will find the writings easy to understand and accessible, and immediately applicable within the therapeutic setting. The practical emphasis of this text will also offer non-analytic clinicians a window into the mind of the analyst, while increasing the settings and populations in which this model can be applied and facilitate integration with other therapeutic orientations. Core Competencies of Relational Psychoanalysis is inspired by Barsness' students; he was motivated to create a primary text that could assist them in understanding the often complex and abstract models of Relational Psychoanalysis. Relevant for graduate students and novice therapists as well as experienced clinicians, supervisors, and professors, this textbook offers a foundational curriculum for the study of Relational Psychoanalysis, presents analytic technique with as clear a frame and purpose as evidenced based models, and serves as a gateway into further study in Relational Psychoanalyses.
