SOLUTION Given: $?t = 9.56 \text{ s}$ $a = 79.81 \text{ m/s}^2$ $v_i = 0 \text{ m/s}$ Unknown: $?x = ?$ Choose the equation(s) or situation: Displacement is unknown, as is the final velocity. Because time, acceleration, and initial velocity are known, the equation for displacement with constant acceleration can be used. $?x = v_i ?t + \frac{1}{2} a ?t^2$

The College Physics for AP(R) Courses text is designed to engage students in their exploration of physics and help them apply these concepts to the Advanced Placement(R) test. This book is Learning List-approved for AP(R) Physics courses. The text and images in this book are grayscale.

Building upon Serway and Jewetta's solid foundation in the modern classic text, Physics for Scientists and Engineers, this first Asia-Pacific edition of Physics is a practical and engaging introduction to Physics. Using international and local case studies and worked examples to add to the concise language and high quality artwork, this new regional edition further engages students and highlights the relevance of this discipline to their learning and lives.

An algebra-based physics text designed for the first year, non-calculus college course. Although it covers the traditional topics in the traditional order, this book is very different from its often over-inflated competitors. This textbook is a ground-breaking iconoclast in this market, answering a clear demand from physics instructors for a clearer, shorter, more readable and less expensive introductory textbook.
