As he spends hours studying his father's world map, a young boy escapes the hunger and misery of refugee life. Based on the author's childhood in Kazakhstan, where he lived as a Polish refugee during World War II.

When war devastates their country, a boy and his parents are forced to flee to another country far east, where they must live in a small room shared with another couple. Food is scarce. But one day, when father goes to the bazaar to buy bread, he comes home with a map instead. The boy and his mother are furious, they are so hungry! But the map floods their cheerless room with colour. The boy becomes fascinated by it and is transported far away without ever leaving the room. Father was right to buy it, after all.

One December afternoon, boy with dog and grandfather with beard take a walk to watch the sun begin to set over the river. When the sun drops low in the sky, they start home. Buildings grow dimmer. People are rushing. As nature's lights go out, one by one, city's lights turn on, revealing brilliant Hanukkah, Kwanza, and Christmas displays in streets, homes, and stores. A stunning picture book that's sure to be a winter holiday classic by Caldecott Medalist Uri Shulevitz.

This little book is confined to very simple “ reading lessons upon the Form and Motions of the Earth, the Points of the Compass, the Meaning of a Map: Definitions. ” The shape and motions of the earth are fundamental ideas—however difficult to grasp. Geography should be learned chiefly from maps, and the child should begin the study by learning “ the meaning of map, ” and how to use it. These subjects are well fitted to form an attractive introduction to the study of Geography: some of them should awaken the delightful

interest which attaches in a child ' s mind to that which is wonderful—incomprehensible. The Map lessons should lead to mechanical efforts, equally delightful. It is only when presented to the child for the first time in the form of stale knowledge and foregone conclusions that the facts taught in these lessons appear dry and repulsive to him. An effort is made in the following pages to treat the subject with the sort of sympathetic interest and freshness which attracts children to a new study. A short summary of the chief points in each reading lesson is given in the form of questions and answers. Easy verses, illustrative of the various subjects, are introduced, in order that the children may connect pleasant poetic fancies with the phenomena upon which

“ Geography ” so much depends. It is hoped that these reading lessons may afford intelligent teaching, even in the hands of a young teacher. The first ideas of Geography—the lessons on “ Place ” —which should make the child observant of local geography, of the features of his own neighbourhood, its heights and hollows and level lands, its streams and ponds—should be conveyed viva voce. At this stage, a class-book cannot take the place of an intelligent teacher. Children should go through the book twice, and should, after the second reading, be able to answer any of the questions from memory. Charlotte M. Mason
