Abstract. Since Paivio's (1971) treatise on imagery and verbal processes, a variety of authors have provided reviews of data and theories concerning imagery and memory for verbal materials. In this way, a long-standing area of investigation has come to be considered in a more systematic and critical manner. The tradition of linking imagery and memory, however, goes back at least to Aristotle, who, in his treatise on memory (l. 450a, 20-25) asserted:

It has long been theorized that imagery underlies many verbal processes. Although this hypothesis is not without controversy, it is supported by connectionist theories which hold that the processing of linguistic units is done in parallel and may be based on different kinds of underlying forms.

Originally published in 1983, the 14 chapters in this volume are based upon presentations made to a conference held at the University of Western Ontario in June, 1981. The primary purpose of that conference was to mark the 10th anniversary of the publication of Allan Paivio's text, Imagery and Verbal Processes, and to acknowledge the continuing contribution that Paivio was making to imagery research and theory at the time. His landmark book had been the major publication in the field of imagery, and during the decade prior to this volume Paivio's theorizing and research dominated the investigation of imaginal processes. It was felt the most appropriate way to honor his achievements and activities, was to hold a conference on current developments in imagery research and theory at the time.

Originally published in 1978 Volume 5 of this Handbook reflects a single theoretical orientation, that characterized by the term human information processing in the literature at the time, but which ranges over a very broad spectrum of cognitive activities. The first two chapters give some overall picture of the background, goals, method, and limitations of the information-processing approach. The remaining chapters treat in detail some principal areas of application - visual processing, mental chronometry, representation of spatial information in memory, problem solving, and the theory of instruction. The first three volumes of the Handbook presented an overview of the field, followed by treatments of conditioning, behavior theory, and human learning and retention. With the fourth volume, the focus of attention shifted from the domain of learning theory to that of cognitive psychology.
