The Introducing... series is a book series of graphic guides covering key thinkers and topics in philosophy, psychology and science, and many others in politics, religion, cultural studies, linguistics and other areas. Books are written by an expert in the field and illustrated, comic-book style, by a leading graphic artist.

Examines the history of psychology; describes the main schools of thought; and introduces such key figures as Freud, Skinner, and Piaget.

What is psychotherapy? How can we choose wisely from so much on offer? This book provides a valuable summary of the main therapies: the "talking cures" of psychoanalysis, behavioral and cognitive techniques, somatic solutions, humanist gestalt and existential approaches, and individual and group therapies.

Here is a unique and valuable summary of this complex profession, focusing on the main types of therapies: the talking cures of psychoanalysis; behavioral and cognitive techniques; somatic solutions; humanist, gestalt and existential approaches; individual and group therapies--plus some of the diverse, less well-known complementary and alternative ways to help or to be helped.

What is psychology? When did it begin? Where did it come from? How does psychology compare with related subjects such as psychiatry and psychotherapy? To what extent is it scientific? "Introducing Psychology" answers all these questions and more, explaining what the subject has been in the past and what it is now. The main "schools" of thought and the sections within psychology are described, including Introspection, Biopsychology, Psychoanalysis, Behaviourism, Comparative (Animal) Psychology, Cognitive Approaches (including the Gestalt movement), Social Psychology, Developmental Psychology and Humanism. The key figures covered include: Freud, Pavlov, Skinner, Bandura, Piaget, Bowlby, Maslow and Rogers, as well as many lesser-known but important psychologists.

How did the mind evolve? How does the human mind differ from the minds of our ancestors, and from the minds of our nearest relatives, the apes? What are the universal features of the human mind, and why are they designed the way they are? If our minds are built by selfish genes, why are we so cooperative? Can the differences between male and female psychology be explained in evolutionary terms? These questions are at the centre of a rapidly growing research programme called evolutionary psychology.

Sociology is interested in the ways people shape the society they live in, and the ways society shapes them. Simply, it is the study of what modern society is and how it functions. In the series' inimitable style, Introducing Sociology traces the origins of sociology from industrialization, revolution and the Enlightenment through to globalization, neoliberalism and the fear of nationalism – introducing you to key thinkers, movements and concepts along the way. You will develop insight into the world around you, as you engage your 'sociological imagination' and explore studies of the city, theories of power and knowledge, concepts of national, racial and sexual identity, and much more.

The ideas of psychoanalysis have permeated Western culture. It is the dominant paradigm through which we understand our emotional lives, and Freud still finds himself an iconic figure. Yet despite the constant stream of anti-Freud literature, little is known about contemporary psychoanalysis. Introducing Psychoanalysis redresses the balance. It introduces psychoanalysis as a unified 'theory of the unconscious' with a variety of different theoretical and therapeutic approaches, explains some of the strange ways in which psychoanalysts think about the mind, and is one of the few books to connect psychoanalysis to everyday life and common understanding of the world. How do psychoanalysts conceptualize the mind? Why was Freud so interested in sex? Is psychoanalysis a science? How does analysis work? In answering these questions, this book offers new insights into the nature of psychoanalytic theory and original ways of describing therapeutic practice. The theory comes alive through Oscar Zarate's insightful and daring illustrations, which enlighten the text. In demystifying and explaining psychoanalysis, this book will be of interest to students, teachers and the general public.

When should you adopt an aggressive business strategy? How do we make decisions when we don't have all the information? What makes international environmental cooperation possible? Game theory is the study of how we make a decision when the outcome of our moves depends on the decisions of someone else. Economists Ivan and Tuvana Pastine explain why, in these situations, we sometimes cooperate,

sometimes clash, and sometimes act in a way that seems completely random. Stylishly brought to life by award-winning cartoonist Tom Humberstone, Game Theory will help readers understand behaviour in everything from our social lives to business, global politics to evolutionary biology. It provides a thrilling new perspective on the world we live in.

Philosophers have always enjoyed asking awkward and provocative questions, such as: What is the nature of reality? What are human beings really like? What is special about the human mind and consciousness? Are we free to choose who we are and what we do? Can we prove that God exists? Can we be certain about anything at all? What is truth? Does language provide us with a true picture of the world? How should we behave towards each other? Do computers think? "Introducing Philosophy" is a comprehensive graphic guide to the thinking of all the significant philosophers of the Western world from Heraclitus to Derrida. It examines and explains their key arguments and ideas without being obscure or solemn. Lively and accessible, it is the perfect introduction to philosophers and philosophical ideas for anyone coming to the subject for the first time.

From the medicine we take, the treatments we receive, the aptitude and psychometric tests given by employers, the cars we drive, the clothes we wear to even the beer we drink, statistics have given shape to the world we inhabit. For the media, statistics are routinely 'damning', 'horrifying', or, occasionally, 'encouraging'. Yet, for all their ubiquity, most of us really don't know what to make of statistics. Exploring the history, mathematics, philosophy and practical use of statistics, Eileen Magnello - accompanied by Bill Mayblin's intelligent graphic illustration - traces the rise of statistics from the ancient Babylonians, Egyptians and Chinese, to the censuses of Romans and the Greeks, and the modern emergence of the term itself in Europe. She explores the 'vital statistics' of, in particular, William Farr, and the mathematical statistics of Karl Pearson and R.A. Fisher. She even tells how knowledge of statistics can prolong one's life, as it did for evolutionary biologist Stephen Jay Gould, given eight months to live after a cancer diagnoses in 1982 - and he lived until 2002. This title offers an enjoyable, surprise-filled tour through a subject that is both fascinating and crucial to understanding our world.
