The JCB 3CX is the world's number one backhoe loader (along with the JCB 4CX). The 3CX is a product of JCB's Efficient Design philosophy, responding to rising fuel prices and environmental concerns with class-leading efficiency and low running costs.

~~The 3CX - the most popular, productive backhoe loader around~~

3CX and 4CX JCB backhoe loaders have a powerful engine which provides excellent performance with the fuel usage of a low power unit. Additionally, to reduce noise and save fuel, the machines contain a viscous fan which doesn't draw engine power. 3CX and 4CX loaders offer lighter level effort for easier control and excellent manoeuvrability.

Routledge Translation Guides cover the key translation text types and genres and equip translators and students of translation with the skills needed to translate them. Concise, accessible and written by leading authorities, they include examples from existing translations, activities, further reading suggestions and a glossary of key terms. Scientific and Technical Translation focuses on texts that are typically translated in scientific and technical domains, such as technical instructions, data sheets and brochures, patents, scientific research articles and abstracts, popular science press releases and news reports. In seven chapters, this practical textbook: Introduces readers to the typical contexts in which scientific and technical translators work; Shows how corpus resources can be used for terminological and phraseological research; Considers how translation technologies are employed in technical and

scientific translation; Explains a range of technical and scientific genres and their translation. Including a wide range of relevant tasks and activities, examples from the most commonly taught language pairs and a glossary of key terms, this is the essential textbook for modules on scientific and technical translation and specialised translation.

"Blue Pelican Java" is a somewhat unusual high school computer science textbook. Most computer science texts will begin with a section on the history of computers followed with a flurry of definitions that are just "so many words" to the average student. The approach here is to first give the student some experience upon which to hang the definitions that come later. The usual practice of introducing classes and objects is deferred until the student has a firm grasp of the fundamentals (loops, decision structures, etc). Thus, the beginning student is not overwhelmed by the simultaneous introduction of OOPs and the fundamentals. The book includes plenty of exercises (many in "contest" form), programming projects, and a huge appendix.

From award-winning musician and composer Warren Ellis comes the unexpected and inspiring story of a piece of chewing gum. Featuring an introduction from Nick Cave. 'Warren has turned this memento, snatched from his idol's piano in a moment of rapture, into a genuine religious artefact.' NICK CAVE 'In praise of meaning-rich relics and magical things. Totally heartwarming project.' MAX PORTER 'A unique study of a fan's devotion, of transcendence and of the artistic vocation - it's got depth and great warmth. It's a beautiful piece of work.' KEVIN BARRY On Thursday 1 July, 1999, Dr Nina Simone gave a rare performance as part of Nick Cave's Meltdown Festival. After the show, in a state of awe, Warren Ellis crept onto the stage, took Dr Simone's piece of chewed gum from the piano, wrapped it in her stage towel and put it in a Tower Records bag. The gum remained with him for twenty years; a sacred totem, his creative muse, growing in significance with every passing year. In 2019, Cave - his collaborator and great friend - asked Warren if there was anything he could contribute to display in his Stranger Than Kindness exhibition. Warren realised the time had come to release the gum. Together they agreed it should be housed in a glass case like a holy relic. Worrying the gum would be damaged or lost, Warren decided to first have it cast in silver and gold, sparking a chain of events that no one could have predicted, one that would take him back to his childhood and his relationship to found objects. Nina Simone's Gum is about how something so small can form beautiful connections between people. It is a story about the meaning we place on things, on experiences, and how they become imbued with spirituality. It is a celebration of artistic process, friendship, understanding and love.

The perfect bedtime book from Nick East and Michelle Robinson - Goodnight Princess As a little girl says goodnight to her dressing up clothes and dolls she is transformed into a princess in a magical realm. A beautiful rhyming text is accompanied by atmospheric illustrations which will delight and soothe all little girls as they snuggle up in bed. A follow-up to the wonderful Goodnight Tractor and Goodnight Digger, this is the perfect bedtime book. Michelle Robinson has always wanted to be an author like her hero Roald Dahl, but all they had in common was the same birthday and a love of chocolate. Now at last, Michelle is a real author too. She lives in Frome, Somerset with her husband, son and daughter. Visit her at www.michellerobinson.co.uk. Nick East has been working as a museum designer for the past 16 years but has always been a storyteller, whether as a child, filling sketchbooks with quirky characters, or as a designer displaying a collection of ancient artifacts. Nick lives near York with his wife and two children and, when he isn't drawing, he is out riding bikes and spending time with his family.

This book offers a comprehensive and readable introduction to modern business and data analytics. It is based on the use of Excel, a tool that virtually all students and professionals have access to. The explanations are focused on understanding the techniques and their proper application, and are supplemented by a wealth of in-chapter and end-of-chapter exercises. In addition to the general statistical methods, the book also includes Monte Carlo simulation and optimization. The second edition has been thoroughly revised: new topics, exercises and examples have been added, and the readability has been further improved. The book is primarily intended for students in business, economics and government, as well as professionals, who need a more rigorous introduction to business and data analytics – yet also need to learn the topic quickly and without overly academic explanations.

Intended to demystify the artistic process, presents the insights of fifteen art instructors on drawing and teaching, offering visual examples of their different styles and approaches as well as exercises and lesson plans.

Note that APM have renamed the APMP exam PMQ (Project Management Qualification) but the syllabus is unchanged. This book is a retitling of the APMP Primer to bring it in line with the renaming of the exam by APM. The content is the same. This book is aligned with the latest exam syllabus based on APMBOK 6.(Note that although APM have now published APMBOK 7, the exam is still aligned with APMBOK 6) The book has been written at a level of detail required to pass the PMQ exam. It can be used for independent study or to supplement a training course or simply read as a basic project management textbook.

In 1947 Vaino J. Holopainen (Waino) and Roy E. Handy Jr. of the small town of Hubbardston, Massachusetts developed the world's first backhoe. This revolutionary invention that could dig and load by swinging side to side, was also the world's first all hydraulically actuated and controlled machine for digging. Vaino and Roy then formed Wain-Roy Corporation. Their grassroots contribution to the earth moving industry lead to the development of twenty-six major backhoe related break-through designs, including the tractor loader backhoe, which formed the worldwide multi-billion-dollar industry that we know today. The amazing story of Wain-Roy and the invention of the backhoe is one of inspiration, struggle, genius, success, theft and failure. Credit for the backhoe is often given to other larger outfits who no-doubt fueled the rise of its widespread use. Few people alive still remember the greatest triumphs and failures of the true inventors and innovators of first backhoe and the first all-hydraulic digger. Authors Lee Horton and Dave Willens, two engineers from Central Massachusetts, wanted to capture this fascinating history before it was lost to time.
