## Propulsion (1): Jet Engine Basics

A jet engine uses the same scientific principle as a car engine: it burns fuel with air (in a chemical reaction called combustion) to release energy that powers a plane, vehicle, or other machine. But instead of using cylinders that go through four steps in turn, it uses a long metal tube that carries out the same four steps in a straight-line sequence—a kind of thrust-making production line!

GAS TURBINE ENGINE THEORY Two elements are required for proper operation of a GTE. One is expressed by Newton ' s third law (action/reaction). The other is the convergent-divergent process (or Bernoulli ' s principle). Convergent means coming closer together, as the inner walls of a tube that is narrowing.
