According to Jung, the ego represents the conscious mind as it comprises the thoughts, memories, and emotions a person is aware of. The ego is largely responsible for feelings of identity and continuity. Like Freud, Jung (1921, 1933) emphasized the importance of the unconscious in relation to personality.

Carl Jung | Simply Psychology

Analytical psychology (German: Analytische Psychologie, sometimes translated as analytic psychology and referred to as Jungian analysis) is a term coined by Carl Jung, a Swiss psychiatrist, to describe research into his new "empirical science" of the psyche. It was designed to distinguish it from Freud's psychoanalytic theories as their seven-year collaboration on psychoanalysis was drawing to ...

Analytical psychology - Wikipedia

Courses in Jungian theory and practice are likewise organized around major themes that include the structure and complexity of the psyche, mythic archetypal patterns, and the capacity to work with the symbolic meaning of dreams. There are three phases to the Training Program. Each phase can be completed in approximately two years as follows: Phase I

Analyst Training - Jungian Psychology | Jungian Theory

As originally defined by Jung, it is distinguished by a focus on the roll of symbolic and spiritual experiences in human life, and rests on Jung's theory of archetypes and the existence of a deep psychic space or collective unconscious.

Analytical Psychology - IAAP

The theme of dialogical otherness within the self is also taken up in Jung's analytical psychology, both in the practice of active imagination and psychotherapy and in the theory of archetypes, and a dialogical approach to inquiry is evident in Jung's work from the outset.

This investigation serves to illuminate the literary nature of Jung's writing in order to shed new light on his psychology and its relationship with literature as a cultural practice.

Post-Jungian Criticism: Theory and Practice by James S ...

Carl Jung (1875-1961) was a Swiss psychiatrist who is today most noted for founding the school of analytical psychology and for his work on archetypes, introversion and extroversion, and the collective unconscious. Jung spent his childhood wandering Switzerland's rural streams and fields, and his adulthood residing at a Swiss lakefront.

Weaknesses of Carl Jung's Theory | Synonym

Following up on Jung's theory of psychological types, where the contrasting attitudes of extraversion and introversion colored the judging (rational) functions of thinking and feeling, and the perceiving (irrational) functions of intuition and sensation, he developed an archetypal model of a dialogical self wherein conscious functions contend with more unconscious complexes in the shadow.
