In mathematics and theoretical physics, a representation of a
Lie group is a linear action of a Lie group on a vector space.
Equivalently, a representation is a smooth homomorphism of
the group into the group of invertible operators on the
vector space. Representations play an important role in the
study of continuous symmetry. A great deal is known about
such representations, a basic tool in their study being the use
of the corresponding 'infinitesimal' representations of Lie
algebras.
