To classify an organism, scientists often use a dichotomous key. A dichotomous key is a listing of specific characteristics, such as structure and behavior, in such a way that an organism can be identified through a process of elimination. In this investigation, it is expected that you: 1) Use a key to identify 14 shark families. 2) Study the method used in phrasing statements in a key. Procedure 1.

Classifying Sharks using a Dichotomous Key

A dichotomous key is a tool that helps to identify an unknown organism. A dichotomous key is a series statements consisting of 2 choices that describe characteristics of the unidentified organism. The user has to make a choice of which of the two statements best describes the unknown organism, then based on that choice moves to the next set

Making a Dichotomous Key Worksheet - Qld Science Teachers

To make a dichotomous key, start by making 2 groups, for example big cats with spots versus big cats without spots. Then, subdivide each of these groups into 2 more groups, like big cats with short tails, big cats with long tails, and big cats with no tails. Continue subdividing your groups until you can't break them down

Dichotomous Key Definition. A dichotomous key is a tool created by scientists to help scientists and laypeople identify objects and organisms. Typically, a dichotomous key for identifying a particular type of object consists of a specific series of questions. When one question is answered, the key directs the user as to what question to ask next.

Dichotomous keys typically stress identifying species by their scientific name, as each individual species has a unique scientific name.
