A book of MCQs in ocular basic science, designed to accompany THE EYE: BASIC SCIENCE IN PRACTICE.

FRCOphth Part 1: 400 SBAs and CRQs offers a wealth of practice questions for candidates preparing to sit the FRCOphth Part 1 exam. With so few revision resources available, this book will be an invaluable tool for candidates requiring comprehensive practice material for successful exam preparation. Organised into 3 complete exam papers, all the questions feature corresponding answers that reinforce key concepts and enable candidates to gain a thorough understanding of the subject. Topics in exam papers 1 and 2 are arranged in line with the FRCOphth syllabus, while exam paper 3 is presented as an unstructured mock exam to replicate the experience of sitting the exam. Covering the full breadth of the syllabus, FRCOphth Part 1 400 SBAs and CRQs provides the definitive revision guide to maximise chances of exam success. 360 SBAs and 40 CRQs (Constructed Response Questions) arranged as three exam papers, providing a large number of questions for exam revision Chapters 1 and 2 are exam papers, structured according to the FRCOphth syllabus to allow organised, progressive revision Chapter 3 is structured as a standard mock exam allowing candidates to practice under exam conditions Answers feature detailed explanations to consolidate knowledge

Written to help trainee ophthalmologists, this textbook is now the recognised text on optics for the examinations of the Royal College of Ophthalmologists and the Royal Surgical Colleges. It approaches the subject from first principles and assumes no previous knowledge of optics. The book has been kept as simple as possible and is liberally complemented with diagrams designed to be easily understood and memorised. Only the most fundamental and clinically useful mathematical formulae are quoted, and the optical principles are applied to clinical situations. Ophthalmology examinations have changed substantially since the last edition was written and a total rewrite of this essential guide has become necessary. The third edition has been made more comprehensive and detailed to keep up with these changes and incorporates three new chapters: refractive surgery, contact lenses and lasers. Other new material includes photometry, visual acuity, contrast sensitivity, colour vision, absorptive lenses, fluorescence, ultrasound, and the specular microscope.

The new Fourth Edition of the Massachusetts Eye and Ear Infirmary Review Manual for Ophthalmology provides a comprehensive self-assessment review and serves as a valuable study aid for any ophthalmologist or ophthalmologist-in-training. The text contains over 1,500 multiple-choice questions covering the entire field of ophthalmology, including all of its major subspecialties. Answers with explanations are provided for each question, and references are included at the end of each chapter. This edition includes more than 250 new full-color photographs and drawings depicting ocular pathology and ophthalmic conditions. All chapters have been updated with new questions to reflect the latest teaching in the field. A companion website features an interactive test bank with images. The test bank includes all 1,540 questions from the book plus over 300 unique questions for additional self-assessment practice.

A sound knowledge of basic sciences is vital for any doctor with an interest in ophthalmology, and is a significant part of all postgraduate examinations in the subject. Featuring 640 multiple choice questions, this is a comprehensive revision guide for candidates taking the basic sciences component of the FRCOphth and ICO examinations. It is highl

Preceded by The eye / John V. Forrester ... [et al.]. 3rd ed. 2008.

The updated Third Edition of this manual is a comprehensive self-assessment review of ophthalmology and a valuable study aid for any ophthalmologist or ophthalmologist-in-training. It contains over 3,000 true/false, matching, and multiple-choice questions covering the entire field of ophthalmology, including the subspecialties. Answers are provided along with brief explanations and extensive references. Several hundred new questions have been added to this new edition, with significantly updated content and revised, expanded explanations. Two new chapters cover General Medicine and International Ophthalmology. This edition also includes more than 100 full-color photographs depicting ocular pathology and ophthalmic conditions.

This book provides a summary of the various aspects of corneal transplantation - the clinical, experimental (including multimedia display of the surgical techniques), immunological, therapeutic and prosthetic components - in one volume. The interested specialist in one field can thus have access to information from the other fields and develop a broad concept of the challenges to be faced in achieving the ultimate goal, i.e. an optically clear, visually satisfactory, functioning corneal graft which is tolerated in the long term without the need for systemic immunosuppression. A second purpose of the book is to provide information regarding current immunological concepts of the process of corneal graft rejection. In particular, recent work in the fields of innate versus adaptive immunity, novel therapeutics and corneal xenografts is presented. Contents: A Brief History of Corneal TransplantationSurgery of Corneal Graft in HumansThe Clinical ProblemEye BankingMHC Antigens, Tissue Typing and Blood Group Matching in Corneal TransplantationThe Alloresponse to Corneal GraftThe Xenoreponse to Corneal GraftAnimal Models of Corneal GraftPathology of Human Corneal TransplantationTherapeutic Approach to Experimental Corneal Graft RejectionImmunosuppression for Human Corneal Graft RejectionTransmission of Disease Through Corneal TransplantationArtificial Corneas Readership: Researchers and practitioners in ophthalmology, optometry, immunology, transplantation and surgery. Key Features:Concise but comprehensive guidebook/handbookCurrent and

translational informationNew concepts of rejection and toleranceMultimedia display of microsurgical techniqueKeywords:Corneal Transplantation;Immunology;Ophthalmology;Tissue;Rejection;Prosthetics;Corneal Graft

In the three years since the 3rd edition much has changed in the treatment of eye conditions. Glaucoma and macular degeneration, laser treatment compared with surgery, how to deal with refractive errors - all these will be described in detail and illustrated with newly commissioned drawings and photographs.
