New research from the University of Maryland shows that proximity to the sun's magnetic field determines a planet's interior composition. A new study disputes the prevailing hypothesis on why Mercury ...

Were Scientists Wrong About the Planet Mercury? Its Big Iron Core May Be Due to Magnetism!

Mercury's dense iron core - three quarters of its diameter - is due to the sun's magnetism and not collisions with other celestial bodies, according to a newly published study.

Mercury's giant iron core was formed because planet was close to magnetic sun when metal dust-filled solar system was being formed
