## **Metric Spaces Of Fuzzy Sets Theory And Applications**

Thank you categorically much for downloading **metric spaces of fuzzy sets theory and applications**. Most likely you have knowledge that, people have look numerous times for their favorite books when this metric spaces of fuzzy sets theory and applications, but end taking place in harmful downloads.

Rather than enjoying a good book past a cup of coffee in the afternoon, then again they juggled in imitation of some harmful virus inside their computer. **metric spaces of fuzzy sets theory and applications** is manageable in our digital library an online access to it

is set as public as a result you can download it instantly. Our digital library saves in complex countries, allowing you to get the most less latency period to download any of our books later than this one. Merely said, the metric spaces of fuzzy sets theory and applications is universally compatible next any devices to read.

Two classes of metrics are introduced for spaces of fuzzy sets. Their equivalence is discussed and basic properties established. A characterisation of compact and locally compact subsets is given in terms of boundedness and  $p$ -mean equicontinuity, and the spaces shown to be locally compact, complete and separable metric spaces.

results from [11] to the case of metric type spaces and cone metric type spaces. The aim of this paper is to generalize the above result. Indeed we prove a fixed point theorem in the set up of fuzzy metric spaces. Finally, one example is presented to verify the effectiveness and applicability of our main results.

INTRODUCTION The concept of fuzzy sets was initiated by L.A. Zadeh in 1965 and the concept of fuzzy metric space was introduced by Kramosil and Michalek. Grabiec proved the contraction principle in the setting of the fuzzy metric space which was further generalization of results by Subrahmanyam for a pair of commuting mappings.
