The Tiger compiler modules have been tested with this version of ML. Support software The Tiger compiler requires the use of ML-Lex (lexical analyzer generator), ML-Yacc (parser generator), and the SML/NJ Library (utility library functions not part of the Standard ML Basis Library); all of these are part of the SML/NJ software distribution. Make sure you use the version of Lex, Yacc, and SML-NJ-Lib that comes with the version of SML/NJ that you are using.

I took Prof. Appel's course in the spring and the book was a great companion for the lectures. It's quite comprehensive and building the compiler is a lot of fun. I also have the the sister-book, Modern Compiler Implementation in C. So if you're choosing between the C, Java and ML versions, I strongly recommend using ML.
