The N52 engine uses BMW's VANOS system, which is a variable valve timing system. The VANOS solenoids are responsible for controlling how much oil flows to the cam gears, which in turn controls the opening and closing of the valves. Understanding VANOS is rather complicated, although you can read our full guide about it here.

The 7 Most Common BMW N52 Engine Problems - BMW Tuning
The N52 was the first water-cooled engine to use magnesium/aluminium composite construction in the engine block. It was also listed as one of Ward's 10 Best Engines in 2006 and 2007. In European markets, the N52 began to be phased out following the release of the BMW N53 in 2007.

BMW N52 - Wikipedia
The BMW N52 is a straight-6 DOHC piston engine which was produced from 2004-2015. Compared with its M54 predecessor, the N52 features variable valve lift (called Valvetronic by BMW), a lighter block due to the use of a magnesium alloy and an electric water pump and a variable oil pump.

Bmw Engines - BMW N52 Engine (2004-2015)
Where To Download N52 Engine Cooling variable oil pump. Bmw Engines - BMW N52 Engine (2004-2015) Inadequate coolant flow or coolant leaks are one of the number one reasons for engine overheating; without coolant, the engine can't maintain it's optimal temperature. 2. Clogged Cooling System. As mentioned before, when coolant cannot properly flow through your BMW's engine it cannot help ...

N52 Engine Cooling - e13components.com
Electric coolant pump will run for about 12 minutes (cycling on and off) to circulate coolant and bleed air from cooling system. Once pump has run the cycle, check level of coolant in expansion tank and adjust as needed. Start and run engine at idle until it reaches operating temperature and check cooling system for leaks. This stream will start and stop as the water pump cycles during the ...

N52 Engine Cooling - queenofinquiry.com
In order to properly flush the coolant system in your N52 6 cylinder engine, all of the antifreeze/coolant must be drained out of the vehicle. The engine must then be flushed with distilled water and a special cleaning agent like LiquiMoly Radiator Cleaner, thoroughly drained again, then refilled with fresh coolant.

BMW E60 Coolant Flush - 2004-2010 5 Series - N52 6 cyl.
It will instead be about why I love the N52. Maybe, by the end, you'll discover that you love it, too. The N52 is the last in a long line of overhead cam, normally aspirated inline six cylinder engines from BMW. To many, that configuration presents the classic ideal of the BMW driving experience. As both customer demands and emissions requirements have changed, so has the BMW lineup. While ...

A Love Letter To BMW's N52 | BimmerLife
The N52 was a six cylinder 24 valve engine, it was BMW's first six to use the Valvetronic technology introduced on the N42 engine. It was produced from 2004 until 2011. The N52 was offered in most BMW models including the E90 three series, X3, X5, Z4 and five series.

BMW N52 and N53 24 Valve Six Cylinder Engines
ESS is proud to offer the newly developed Gen.3 E-Charger G1 based supercharger system for the BMW N52 engine family. This supercharger system is designed to offer the customer a very quick and easy, 100% bolt-on installation. With this supercharger system we bump the power output by 80-100 horsepower! Some of the more noteworthy features of the supercharger are: -E-Charger G1 supercharger ...

ESS N52 G1 Supercharger System (Gen.3) - ESS Tuning
The BMW engines inline 6 cylinder N51 N52 N54 N55 are equipped with electric water pump. This allows the DME to fully control and modulate the coolant flow through the engine without dependency on RPM. This electric design allows for engine power output efficiency and balanced cooling responsibilities for the engine.

BMW N52 N54 Electric Water Pump Repair - MINHS Automotive
1. Coolant Leak. Your BMW's engine requires coolant in order to regulate the temperature of the engine. During warmer seasons of the year, your engine has to work harder to keep the engine temperature at the appropriate level. Especially under these conditions, it can be detrimental to spring a coolant leak. Air forces its way inside the ...

4 Main Reasons for Overheating of a BMW Engine
BMW N52B30 engine reliability, problems and repair. It is the first engine in the new N52 series which also includes N52B25.The N52B30 engine has 6 cylinders and is totally different from previous versions of M54B30.It is equipped by popular Double-VANOS camshaft and light-weight aluminum-magnesium block of cylinders, another crankshaft and lighter connecting rods and pistons.
