This is the industry's most comprehensive, realistic, and useful guide to Microsoft Lync Server 2010. It brings together "in-the-trenches" guidance for all facets of planning, integration, deployment, and administration, from expert consultants who've spent years implementing Microsoft Unified Communications solutions. The authors first introduce Microsoft Lync Server 2010 and show how it represents a powerful leap beyond earlier unified communications platforms. They systematically cover every form of communication Lync Server can manage, including IP voice, instant messaging, audio/video conferencing, web conferencing, and more. You'll find expert guidance on planning infrastructure, managing day-to-day operations, enforcing security, troubleshooting problems, and many other crucial topics. Drawing on their extensive experience, the authors combine theory, step-by-step configuration instructions, and best practices from real enterprise environments. They identify common mistakes and present proven solutions and workarounds. Simply put,

Can there be such a thing as too many men in kilts? Normally Liss MacCrimmon, proprietor of Moosetookalook, Maine's one and only Scottish Emporium, would say no. But that's before one of them turns out to be murderous. . . The bagpipes are blaring at Moosetookalook's finest hotel, reopened just

in time to host an annual celebration of Scotland's most beloved poet. But when the Scottish Heritage Appreciation Society arrives on the scene, they bring more than a hunger for haggis and a passion for plaid. The quarrelsome group harbors their share of long held grudges, and the animosity only grows as the whiskey flows. Then a fierce blizzard hits, trapping everyone--angry Scotsmen, hapless hotel staff, and Liss herself--indoors. It isn't long before a body is discovered face down in a storage room, covered in tartan--and blood. Now Liss will have to work fast to solve this crime before another body goes as cold as the snowstorm keeping her cooped up with a killer.

Current and relevant to today's students, SOCIOLOGY IN OUR TIMES: THE ESSENTIALS, 10th Edition presents the latest available data and new insights on behaviors, issues, and trends in our nation and world from a sociological perspective. The new edition of this bestselling text emphasizes the theme of social change and the ways in which media--particularly social media--and other forms of technology inevitably bring about new ways of living, interacting with others, or doing certain activities or task. New sections on social change have been added throughout the

book, and the theme also appears in the "Sociology Works!" and "Media" features. "Sociology and Social Policy" boxes return to this edition, examining issues such as gun control, prevention of military suicides, and whether employers should be allowed to "spy" on their employees. First-person accounts of individuals' lived experiences draw students into the chapter content by illuminating topics that reflect the text's primary themes of diversity, the application of sociology to everyday life, global comparisons, media, and social change. New timely topics include environmental activism, immigration, bullying and social media, and same-sex marriage. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This book elucidates what it means to transition to alternative sources of energy and discusses the potential for this energy transition to be a more democratic process. The book dynamically describes a recent sociotechnical study of a number of energy transitions occurring in several countries - France, Germany and Tunisia, and involving different energy technologies - including solar, on/off-shore wind, smart grids, biomass, low-energy buildings, and carbon capture and storage. Drawing on a pragmatist

tradition of social inquiry, the authors examine the consequences of energy transition processes for the actors and entities that are affected by them, as well as the spaces for political participation they offer. This critical inquiry is organised according to foundational categories that have defined the energy transition - 'renewable' energy resources, markets, economic instruments, technological demonstration, spatiality ('scale') and temporality ('horizon(s)'). Using a set of select case studies, this book systematically investigates the role these categories play in the current developments in energy transitions.
