These are covered in operating system design and implementation. Operating System Design Goals. It is quite complicated to define all the goals and specifications of the operating system while designing it. The design changes depending on the type of the operating system i.e if it is batch system, time shared system, single user system, multi user system, distributed system etc. There are basically two types of goals while designing an operating system.

Operating systems have to deal with potentially hostile users: Security and privacy are two main factors that users prefer when it comes to a good operating system. There can be hostile users who may steal user programs or even hi-jack machines. Operating system designs have to incorporate these aspects in to their design process as well.
