A mouth ulcer is an ulcer that occurs on the mucous membrane of the oral cavity. Mouth ulcers are very common, occurring in association with many diseases and by many different mechanisms, but usually there is no serious underlying cause. The two most common causes of oral ulceration are local trauma and aphthous stomatitis, a condition characterized by recurrent formation of oral ulcers for largely unknown reasons. Mouth ulcers often cause pain and discomfort and may alter the person's choice o

~~Mouth ulcer — Wikipedia~~

Aphthous ulcers are painful, clearly defined, round or ovoid, shallow ulcers that are confined to the mouth and are not associated with systemic disease. They are often recurrent, with onset usually in childhood. Single ulcers, or recurrent ulcers in the same place, may be caused by damage to the mouth, for example biting the cheek, or damage to the buccal mucosa with a toothbrush, sharp tooth, or filling.

The oral mucosa is primarily involved in less than 1% of melanomas. Lesions are largely macular, but nodular and even pedunculated lesions occur. The pigmentation varies from dark brown to blue-black; however, mucosa-coloured and white lesions are occasionally noted, and erythema is observed when the lesions are inflamed.

This book is designed to re-establish the position of the oral cavity and its mucosa at the forefront of defence and maintenance of homeostatic mechanisms that protect against disease not just locally but also systemically. The oral mucosa is a unique collection of tissues that constitutes a highly active environment with its own unique microflora and homeostatic interaction with the innate and adaptive immune responses. As

an immune tissue the oral mucosa was somewhat neglected in the past owing to the tendency to assume similarity to the gut mucosa. More recently it has become apparent that the oral mucosa is a complex environment and, like the esophageal mucosa, has more in common with vaginal tissue than with the gut.

Furthermore, the ability of the oral mucosa to act as an immune inductive site has made it an attractive area of research in terms of desensitization for allergic reactions and possibly autoimmune responses. In this book, recognized experts in the field provide up-to-date coverage of all aspects of the structure
