"If there was ever any doubt of a graphic novel 's ability to achieve a high level of storytelling, this book blows it away."—Newsday "Astonishing in its scope, breadth and execution."—The Independent Twenty years in the making, this sweeping masterpiece charts Berlin through the rise of Nazism. During the past two decades, Jason Lutes has quietly created one of the masterworks of the graphic novel golden age. Berlin is one of the high-water marks of the medium: rich in its well-researched historical detail, compassionate in its character studies, and as timely as ever in its depiction of a society slowly awakening to the stranglehold of fascism. Berlin is an intricate look at the fall of the Weimar Republic through the eyes of its citizens—Marthe Müller, a young woman escaping the memory of a brother killed in World War I, Kurt Severing, an idealistic journalist losing faith in the printed word as fascism and extremism take hold; the Brauns, a family torn apart by poverty and politics. Lutes weaves these characters ' lives into the larger fabric of a city slowly ripping apart. The city itself is the central protagonist in this historical fiction. Lavish salons, crumbling sidewalks, dusty attics, and train stations: all these places come alive in Lutes ' masterful hand. Weimar Berlin was the world 's metropolis, where intellectualism, creativity, and sensuous liberal values thrived, and Lutes maps its tragic, inevitable decline. Devastatingly relevant and beautifully told, Berlin is one of the great epics of the comics medium.

This IBM® Redbooks® Product Guide publication describes the IBM FlashSystem® 5200 solution, which is a next-generation IBM FlashSystem control enclosure. It is an NVMe end-to-end platform that is targeted at the entry and midrange market and delivers the full capabilities of IBM FlashCore® technology. It also provides a rich set of software-defined storage (SDS) features that are delivered by IBM Spectrum® Virtualize, including the following features: Data reduction and deduplication Dynamic tiering Thin provisioning Snapshots Cloning Replication Data copy service Transparent Cloud Tiering IBM HyperSwap® including 3-site replication for high availability (HA) Scale-out and scale-up configurations further enhance capacity and throughput for better availability. The IBM FlashSystem 5200 is a high-performance storage solution that is based on a revolutionary 1U form factor. It consists of 12 NVMe Flash Devices in a 1U storage enclosure drawer with full redundant canister components and no single point of failure. It is designed for businesses of all sizes, including small, remote, branch offices and regional clients. It is a smarter, self-optimizing solution that requires less management, which enables organizations to overcome their storage challenges. Flash has come of age and price point reductions mean that lower parts of the storage market are seeing the value of moving over to flash and NVMe-based solutions. The IBM FlashSystem 5200 advances this transition by providing incredibly dense tiers of flash in a more affordable package. With the benefit of IBM FlashCore Module compression and new QLC flash-based technology becoming available, a compelling argument exists to move away from Nearline SAS storage and on to NVMe. With the release of IBM FlashSystem 5200 Software V8.4, extra functions and features are available, including support for new Distributed RAID1 (DRAID1) features, GUI enhancements, Redirect-on-write for Data Reduction Pool (DRP) snapshots, and 3-site replication capabilities. This book is aimed at pre-sales and post-sales technical support and marketing and storage administrators.
