RADIUS, or Remote Authentication Dial-In User Service, is a widely deployed protocol that enables companies to authenticate, authorize and account for remote users who want access to a system or service from a central network server. Originally developed for dial-up remote access, RADIUS is now used by virtual private network (VPN) servers, wireless access points, authenticating Ethernet switches, Digital Subscriber Line (DSL) access, and other network access types.

### Radius [securing public access to private resources] (Book ...

Remote Authentication Dial-In User Service (RADIUS) is a network protocol that provides security to networks against unauthorized access. RADIUS secures a network by enabling centralized authentication of dial-in users and authorizing their access to use a network service. It manages remote user authentication, authorization and accounting (AAA).

### What is Remote Authentication Dial-in User Service (RADIUS) ...

As the Wi-Fi Alliance and IEEE recommend, network administrators should secure access to the wireless link layer by using a RADIUS server with EAP for user authentication and encryption key generation. This provides a baseline of security that is necessary to protect wireless users and the wired network they are accessing.
