10 Best Printed Renal Grand Rounds From The Beginning A ...
At renal grand rounds this week, I presented a case of a gentleman who presented with fevers, confusion, and lower extremity pain during dialysis. The patient would spike low grade fevers pre-HD and then fevers up to 105 post-HD. He had a tunneled HD line, but blood cultures were negative, and his fevers persisted in spite of changing the line.

Renal Grand Rounds: weekly - Northwest Kidney Center (NKC) These are a major component of the Adult and Pediatric Nephrology divisional teaching programs and contain material required for program accreditation and for ongoing medical education.

Conferences—Division of Nephrology—University of ...
UCSF Renal Grand Rounds is a weekly conference devoted to new developments in clinical nephrology, clinical research, and basic science research. Participants include adult nephrologists from all three hospitals, kidney transplant nephrologists and surgeons, pediatric nephrologists, and community nephrologists.

As the field of clinical nephrology has become increasingly diverse, it is impossible for any single person to keep up with all the developments in the different areas involved. It is against this background that the editors of the present volume have organized a series of conferences at the Renal Unit of the Ruperto Carola University of Heidelberg, with the aim to provide up-to-date information on various subjects to the nonexpert. The present volume is a reprint of a series of these lectures, first published in a special section of NEPHRON. It covers such diverse aspects of clinical nephrology as the cardiovascular system, transplantation, immunosuppression and dialysis, providing a most interesting overview of recent highlights in the field.

This is the story of a boy raised up in a village in Poland during World War II, with his father deported to concentration camps throughout the war. Some years after he graduated from medical school, he serendipitously entered the then developing field of dialysis, and he eventually embarked on a career-long practice in the field, where he contributed to the development of a number of new inventions and therapeutic methods. The book contains 13 chapters covering the author's childhood, education, and his career-long contributions to the field of nephrology. The book includes inspirational stories of his patients; the struggles he faced in the course of getting his numerous inventions patented; his research work in the 1990s; his work of teaching and consulting; and not the least, his travels to interesting places unrelated to business. The book concludes with an epilogue summarizing his life, as well as his predictions regarding treatment of chronic renal failure in the future.

An historical overview of the evolution of modern internal medicine; includes discussions of cardiology and gastroenerology, rheumatology, infectious diseases, nephrology and endocrinology, and other subspecialties.

This unique book adopts a self learning approach based on case studies of real life situations encountered in daily practice. Beginning with an emphasis on the importance of clinical analysis and accurate diagnosis, the text then examines management dilemmas and recurrent problems in clinical practice. The final section looks at clinical presentations of paediatric tuberculosis, describing how changing inter-relationships between the agent, host and environment can influence clinical manifestations, diagnosis and management of the disease.
