Poultry

While the female embryo in chicken has two sets of reproductive organs, only one of these, the left survives and reaches maturity to produce eggs.

The single

Read PDF Reproduction In Poultry

surviving ovary is located in the laying hen just in front of the kidneys in the abdominal cavity and is firmly attached to the wall of the cavity.

The reproductive system of a chicken hen is made up of two parts: the ovary and the oviduct. Ova (yolks) develop in the ovary. When an ovum (singular

Read PDF Reproduction In

of ova) has matured, it is released from the ovary into the oviduct. This release of the ovum is ovulation.
