Roof framing depends on the type of roof you want to build. There are several roof types; the gable roof, hip roof, gambrel roof, flat roof, shed roof, mansard roof, and many more custom roof types. Framers Stick-Building a Hip Roof You can learn a great deal about roof framing by understanding the concepts of framing a gable or shed roof.

Roof Framing - Learn How to Frame a Roof and Calculate ...

To frame a roof, start by choosing a roof style, like A-frame or gabled. Then, gather your measurements by calculating the run, rise, and length of each rafter segment in feet, and the pitch of your roof in inches. Next, use these calculations to determine how many rafters you'll need for your roof and cut them to size.

How to Frame a Roof (with Pictures) - wikiHow

Nearly all roofs are framed using one of two methods: standard "stick" framing or the newer "truss" framing. Stick-framed roofs utilize individual rafters that span from the top of exterior walls to the ridge. ©HomeTips. Stick-framed roof is built one member at a time.

Roof Framing Basics | HomeTips

Roof framing is one of those carpenter skills that appears quite complicated, and indeed, some roof designs are difficult. Roofs are basically five types: shed, gable, hip, gambrel and mansard. Another common design in the Northeast is the "saltbox," which is a gable roof with one longer side.

Roof Framing 101 - Extreme How To

There are two common ways of framing the roof of a house: with premanufactured trusses, or with rafters and ceiling joists, commonly called stick framing. While truss roofs are the most popular construction style today — by some estimates, truss roofs outnumber stick-frame roofs two to one— there are regions of the country where builders still prefer stick-frame roofing.
