Matthias Luebken (Instana) **Semantics With Applications An Appetizer**

Historically important application areas are used together with some exciting potential applications including: validating prototype implementations of programming languages; verifying program analyses that are part of more advanced implementations of programming languages; verifying security analyses; and, verifying useful program properties including information about execution time. This is an introductory text that should serve as an appetizer to the whole area of semantics with applications.

Semantics with Applications: An Appetizer | Oxfam GB ...

This textbook is an introduction to the use of formal methods ranging from semantics of key programming constructs to techniques for the analysis and verification of programs. The authors use program graphs as the mechanism for representing the control structure of programs in order to find a balance between generality and conceptual complexity.
