Originally published in 1962, this was the first book to explore the identification of organic compounds using spectroscopy. It provides a thorough introduction to the three areas of spectrometry most widely used in spectrometric identification: mass spectrometry, infrared spectrometry, and nuclear magnetic resonance spectrometry.

As pointed out by the authors in the preface, the goal of *Spectrometric Identification of Organic Compounds* is to teach problem solving. There is hardly any doubt that this book has accomplished this goal. The exposition of the subject matter is clear. It covers all the necessary techniques for spectroscopic identification.
