With over four hundred illustrations and nearly sixty colour photographs, as well as interviews with many well-known professionals, Stage Lighting Design is a comprehensive, insightful and inspiring book that every designer and would-be designer should own. It is arranged in four sections: Design: the basic principles, illustrated with reference to specific productions History: a brief survey of the historical development of stage lighting The Life: interviews with 14 other lighting designers, plus notes on Pilbrow's own career Mechanics: a comprehensive section dealing with all the technical data today's designer will need.

Stage Lighting: The Fundamentals is written specifically for introductory stage lighting courses. The book begins with an examination of the nature of light, perception, and color, then leads into a conversation of stage lighting equipment and technicians. Lamps, luminaries, controls/dimming, and electricity form the basis of these chapters. The book also provides a detailed explanation and overview of the lighting design process for the theatre and several other traditional forms of entertainment. Finally, the book explores a variety of additional areas where lighting designers can find related future employment, such as concert and corporate lighting, themed design, architectural and landscape lighting, and computer animation. New for this edition: enlarged full-color illustrations, photographs, light plots and examples of lighting design; updated information on LED lighting and equipment; expanded discussion of the practical use of color as a designer; expanded discussion of psychological/perceptual effects of color; new discussion of color mixing through light sources that make use of additive mixing; expanded discussion of industry professions; expanded discussion and illustrations relating to photometrics; expanded discussion and examples of control protocols and new equipment; and updated designer profiles along with the addition of still more designer profiles.

The Stage Lighting Handbook is well established as the classic practical lighting guide. The book explains the process of designing lighting for all forms of stage production and describes the equipment used. This new edition includes up-to-date information on new equipment and discusses its impact on working methods.

This guide helps lighting designers with the creative and operational challenges they face in their rapidly evolving industry. Providing respected and clear coverage of the process of programming automated lighting fixtures, the author brings the designer from basic principles to preproduction preparations. Concepts, procedures, and guidelines to ensure a successful production are covered as well as troubleshooting, much needed information on work relationships, and technology including LED lighting, console networking, digital lighting, and more. Chapters are peppered with advice and war stories from some of the most prominent lighting designers of today.

Now in its seventh edition, Designing with Light introduces readers to the art, craft, and technology of stage lighting and media projection. The new edition is fully updated to include current information on the technology of stage lighting: lighting fixtures, lamps, cabling, dimmers, control boards, as well as electrical theory. Readers will learn how designed light is used to enhance the audience's understanding and enjoyment of a production. The book includes specific information on drafting the light plot, explores the challenges of designing for different stage configurations, and provides examples of lighting designs for dramas, musicals, and dance. It also features comments and thoughts from active designers from both mainstream theatrical productions and related industries. Written for students of Lighting Design and Technology as well as professional technicians and designers, Designing with Light offers a comprehensive survey of the practical and aesthetic aspects of stage lighting design.
