The general purpose of this study was to deepen and broaden thinking about the nature and implications of possible Multi-Skilled Soldier (MSS) Concept implementation.

Specific objectives were

# Where To Download

(1) to determine applicability of the MSS to the Stryker Brigade Combat Team (SBCT), as it might be implemented in Initial Entry Training (IET) and (2) to prototype MSS Concept implementation for the SBCT, considering possible implementation for the Future Force.

The report also defines

# Where To Download

the MSS; shows how the MSS Concept might fit conceptually within a larger Army training, education, and professional development model for Soldiers of all ranks; offers an MSS Program design for IET; and crafts actionable recommendations regarding general MSS implementation for IET.

# Where To Download

The study concludes that the MSS Concept is fully applicable to the SBCT, as well as the so-called Current Force. It also concludes that MSS implementation would have a significant salutary effect on unit training readiness postures across the force. This study relied heavily on insights and analysis gained from

interviews with groups of senior NCOs and officers within the 3rd Brigade (SBCT), 2nd Infantry Division, Ft. Lewis, WA, during September 2002.

minimal classroom instruction. Stryker drivers must know how to operate the vehicle's equipment effectively in all environments. They must be challenged to use safe driving practices and increase their awareness of accident avoidance. This TC is designed to accommodate these skills by providing: •
