Calc the subnet bits. 172.30.0.0/28: Net bits = 16bits. Host bits = 4bits. Subnet bits = 12bits. The total subnets is 4096 (based on 12bits) The total hosts per subnet. Lets us the magic number. 256 - 240 = 16. Minus 2 (1 for network number and 1 for broadcast) = 14. Answer Total subnets = 4096 Total hosts (per subnet) = 14. Calculate the Valid host Range

Subnets help reduce network congestion. A subnet is a widely-used  
practice in network management that involves breaking up a network  
into sections. Subnetting creates several interconnected networks  
under a single address space, viewing each section as a sub-network,  
or "subnet", rather than a collection of independent networks.

Welcome to the subnetting.net subnetting tutorial. This training session will teach you everything you need to know to pass any exam that requires TCP/IP knowledge. In addition, the methods you will learn here will allow you to not only solve subnetting questions, it will help you increase your speed and master TCP/IP concepts.

## How To Subnet

A subnet mask defines which chunk of an IP address is the host ID and which portion is the subnet network ID. This trick is accomplished using a subnet mask, another 32-bit number. A subnet mask works like a filter with the mask identifying the IP address bits that represent the network ID with a 1, and the bits that represent the host ID with a 0.

## Subnetting for dummies - Spiceworks

Easiest is to sub net on a byte boundary which would mean a subnet mask of 255.255.255.0. This would allocate 8 bits for the subnet and 8 bits for the host. We need to accommodate around 200 hosts which requires 8 bits which we have. We need 4 subnets which requires 4 bits and we have 8 bits. So we have more than enough. Classless Inter-Domain Routing (CIDR)
