For anyone who has blanched at the uphill prospect of finishing a thesis, dissertation, or book, this piece holds out something more practical than hope: a plan.

When a dissertation crosses my desk, I usually want to grab it by its metaphorical lapels and give it a good shake. "You know something!" I would say if it could hear me. "Now tell it to us in language we can understand!" Since its publication in 2005, *From Dissertation to Book* has helped thousands of young academic authors get their books beyond the thesis committee and into the hands of interested publishers and general readers. Now revised and updated to reflect the evolution of scholarly publishing, this edition includes a new chapter arguing that the future of academic writing is in the hands of young scholars who must create work that meets the broader expectations of readers rather than the narrow requirements of academic committees. At the heart of *From Dissertation to Book* is the idea that revising the dissertation is fundamentally a process of shifting its focus from the concerns of a narrow audience—a committee or advisors—to those of a broader scholarly audience that wants writing to be both informative and engaging. William Germano offers clear guidance on how to do this, with advice on such topics as rethinking the table of contents, taming runaway footnotes, shaping chapter length, and confronting the limitations of jargon, alongside helpful timetables for light or heavy revision. Germano draws on his years of experience in both academia and publishing to show writers how to turn a dissertation into a book that an audience will actually enjoy, whether reading on a page or a screen. Germano also acknowledges that not all dissertations can or even should become books and explores other, often overlooked, options, such as turning them into journal articles or chapters in an edited work. With clear directions, engaging examples, and an eye for the idiosyncrasies of academic writing, *From Dissertation to Book* reveals to recent PhDs the secrets of careful and thoughtful revision—a skill

that will be truly invaluable as they add "author" to their curriculum vitae.

In this invitation to "concept-driven" sociology, defying the conventional split between "theory" and "methodology" (as well as between "quantitative" and "qualitative" research), Eviatar Zerubavel introduces a yet unarticulated "Simmelian" method of theorizing specifically designed to reveal fundamental, often hidden social patterns. Insisting that it can actually be taught, he examines the theoretico-methodological process (revolving around the epistemic and analytical acts of focusing, generalizing, "examplifying," and analogizing) by which concept-driven researchers can distill generic social patterns from the culturally, historically, and domain-specific contexts in which they encounter them empirically. Disregarding conventionally noted substantive variability in order to uncover conventionally disregarded formal commonalities, *Generally Speaking* draws on cross-cultural, cross-historical, cross-domain, and cross-level analogies in an effort to reveal formal parallels across disparate contexts. Using numerous examples from culturally and historically diverse contexts and a wide range of social domains while also disregarding scale, Zerubavel thus introduces a pronouncedly transcontextual "generic" sociology.

All students and professors need to write, and many struggle to finish their stalled dissertations, journal articles, book chapters, or grant proposals. Writing is hard work and can be difficult to wedge into a frenetic academic schedule. In this practical, light-hearted, and encouraging book, Paul Silvia explains that writing productively does not require innate skills or special traits but specific tactics and actions. Drawing examples from his own field of psychology, he shows readers how to overcome motivational roadblocks and become prolific without sacrificing evenings, weekends, and vacations. After describing strategies for writing productively, the author gives detailed advice from the trenches on how to write, submit, revise, and resubmit articles, how to improve writing quality, and how to write and publish academic work.

Shows how an artificial system devised to order our activities, the seven-day week, has been shaped by religion, politics, and economics from the biblical era through varied, exotic civilizations and into the twentieth century

Most of us are fascinated by the conventional storybook account of Christopher Columbus' heroic discovery of America in 1492. Yet, should the credit for discovering America go to a man who insisted it was but a few islands off the shores of China? In *Terra Cognita*, Eviatar Zerubavel argues that physical encounters are only one part of the complex, multifaceted process of discovery. Such encounters must be complemented by an understanding of the true identity of what is being discovered. The small group of islands claimed by Columbus to have been discovered off the shores of Asia was a far cry from what we now call America. The discovery of the New World was not achieved in a single day but was a slow process--mental as well as physical--that lasted almost three hundred years. By celebrating 1492 as a year of discovery, we inevitably distort the reality of history. In vividly documenting how a slowly emerging New World gradually forced itself into Europe's consciousness, Zerubavel shows that Columbus did not discover America on October 12, 1492. Supplemented by

fascinating old maps and a new preface written for this paperback edition, *Terra Cognita* will be of interest to historians, geographers, cognitive scientists, sociologists, and students of culture.

For anyone who has blanched at the uphill prospect of finishing a long piece of writing, this book holds out something more practical than hope: it offers a plan. *The Clockwork Muse* is designed to help prospective authors develop a workable timetable for completing long and often formidable projects.

A Short Guide to Academic Writing de-mystifies the process of writing and describes everything that is needed to write in an academic and professional style. Contained are instructions related to the writing process and what the product should look like. Written in a crisp, concise style, Andrew Johnson makes these ideas easily accessible to readers of all levels of writing experience. This text contains information that is appropriate for any undergraduate or graduate student who is learning to write academic papers or professional documents using APA (5th edition) style.

Why do we eat sardines, but never goldfish; ducks, but never parrots? Why does adding cheese make a hamburger a "cheeseburger" whereas adding ketchup does not make it a "ketchupburger"? By the same token, how do we determine which things said at a meeting should be included in the minutes and which ought to be considered "off the record" and officially disregarded? In this wide-ranging and provocative book, Eviatar Zerubavel argues that cognitive science cannot answer these questions, since it addresses cognition on only two levels: the individual and the universal. To fill the gap between the Romantic vision of the solitary thinker whose thoughts are the product of unique experience, and the cognitive-psychological view, which revolves around the search for the universal foundations of human cognition, Zerubavel charts an expansive social realm of mind--a domain that focuses on the conventional, normative aspects of the way we think. With witty anecdote and revealing analogy, Zerubavel illuminates the social foundation of mental actions such as perceiving, attending, classifying, remembering, assigning meaning, and reckoning the time. What takes place inside our heads, he reminds us, is deeply affected by our social environments, which are typically groups that are larger than the individual yet considerably smaller than the human race. Thus, we develop a nonuniversal software for thinking as Americans or Chinese, lawyers or teachers, Catholics or Jews, Baby Boomers or Gen-Xers. Zerubavel explores the fascinating ways in which thought communities carve up and classify reality, assign meanings, and perceive things, "defamiliarizing" in the process many taken-for-granted assumptions.
