Biodiversity Underpins Economic Activity Agriculture, forestry and fisheries products, stable natural hydrological cycles, fertile soils, a balanced climate and numerous other vital ecosystem services depend upon the conservation of biological diversity.

Economic Benefits of Biodiversity - ConservationTools

Biodiversity generates direct economic value when people care about it. This means that some measure of biodiversity enters into at least some person's utility function. So, an individual is happier the greater the number of bird species in his local forest, or the higher the abundance of individual species populations.

The Economic Value of Biodiversity

We then explain the ways in which protecting biodiversity generates economic benefits in terms of direct and indirect values. Empirical approaches to estimating direct and indirect values are presented, along with a selection of recent evidence on how substantial these values are. The use of asset accounting approaches to track biodiversity values over time is discussed, in the context of sustainable development paths.

The Economic Value of Biodiversity | Annual Review of ...

• biodiversity has economic value. If the world's economies are rationally organized, this suggests that biodiversity must have less economic value than the economic activities giving rise to its loss; • yet we know that many biological resources do have significant economic value. We also

Biodiversity is a source of economic wealth for many regions of the world, such as many nature reserves, parks and forests, where wildlife and plants are sources of beauty and joy for many people. Ecotourism, in particular, is a growing outdoor recreational activity. In 1988, it is estimated that 157-236 million people took part in ecotourism.

Economics of Biodiversity - Wikipedia

The economic value of biodiversity is measured in the numerous benefits that are derived from it: both tangible and intangible. These range from the things that are produced and sold, which are derived both directly and indirectly from biodiversity, to the non-marketed things that contribute to both our well-being and to the economy.

OECD Library | Economic Value of Biodiversity

The Economics of Ecosystems and Biodiversity (TEEB) is a global initiative assessing the costs of the loss of biodiversity and the associated decline in ecosystem services worldwide. It can help decision-makers recognize, demonstrate and capture the values of ecosystem services and biodiversity. TEEB is now in its third phase.
