Take, for example, a function  $u$  that may be the dependent variable in a PDE (i.e., temperature, electric potential, pressure, etc.) The function  $u$  can be approximated by a function  $u_h$  using linear combinations of basis functions according to the following

Areas of interest include the traditional fields of structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential. The FEM is a particular numerical method for solving partial differential equations in two or three space variables. To solve a problem, the FEM subdivides a large
