Urban wildlife is any wild animal that lives in an urban environment, such as New York City. Urban wildlife includes birds, mammals, reptiles, fish and amphibians. Some urban wildlife is native, like eastern grey squirrels, while some are non-native, like mute swans.

The Very Hungry City: Urban Energy Efficiency and the ...

"This book explores how cities around the world consume energy, assesses innovative ideas for reducing urban energy consumption, and discusses why energy efficiency will determine which cities thrive economically in the future"--Provided by publisher.

'Cities cover just 2% of the world's surface, but consume 75% of the world's resources'. The relationship between food and cities is fundamental to our everyday lives. Food shapes cities and through them it moulds us - along with the countryside that feeds us. Yet few of us are conscious of the process and we rarely stop to wonder how food reaches our plates. Hungry City examines the way in which modern food production has damaged the balance of human existence, and reveals that we have yet to resolve a centuries-old dilemma - one which holds the key to a host of current problems, from obesity and the inexorable rise of the supermarkets, to the destruction of the natural world. Original, inspiring and written with infectious enthusiasm and belief, Hungry City illuminates an issue that is fundamental to us all.

'A visionary look at how quality food should replace money as the new world currency' Tim Spector 'Hugely ambitious and beautifully written...destined to become a modern classic' Bee Wilson How we search for, make and consume food has defined human history. It transforms our bodies and homes, our politics and our trade, our landscapes and our climate. But by forgetting our culinary heritage and relying on cheap, intensively produced food, we have drifted into a way of life that threatens our planet and ourselves. What if there were a more sustainable way to eat and live? Drawing on many disciplines, as well as stories of the farmers, designers and economists who are remaking our relationship with food, this inspiring and deeply thoughtful book gives us a provocative and exhilarating vision for change, and points the way to a better future. "Utterly brilliant" Thomasina Miers WINNER OF THE 2021 GUILD FOOD OF WRITERS AWARD FOR BEST FOOD BOOK •Shortlisted for the Wainwright Prize 2020•

Modern city dwellers are largely detached from the environmental effects of their daily lives. The sources of the water they drink, the food they eat, and the energy they consume are all but invisible, often coming from other continents, and their waste ends up in places beyond their city boundaries. Cities as Sustainable Ecosystems shows how cities and their residents can begin to reintegrate into their bioregional environment, and how cities themselves can be planned with nature's organizing principles in mind. Taking cues from living systems for sustainability strategies, Newman and Jennings reassess urban design by exploring flows of energy, materials, and information, along with the interactions between human and non-human parts of the system. Drawing on examples from all corners of the world, the authors explore natural patterns and processes that cities can emulate in order to move toward sustainability. Some cities have adopted simple strategies such as harvesting rainwater, greening roofs, and producing renewable energy. Others have created biodiversity parks for endangered species, community gardens that support a connection to their foodshed, and pedestrian-friendly spaces that encourage walking and cycling. A powerful model for urban redevelopment, Cities as Sustainable Ecosystems describes aspects of urban ecosystems from the visioning process to achieving economic security to fostering a sense of place.

Urban planning is as broad as the scope of urban government, which is closest to the people. It is an essential pre-requisite to the successful performance of duties of urban government, because it does offer most logical approach to solving city's problems, arising from rapid urban growth and expansion, as well as from changing conditions affecting inner city. This book is about establishing what has gone wrong with urban planning in Delhi, and of fixing flawed urban planning in operation. In this context, it is pertinent to have an understanding of the metropolis of Delhi, as much as the urban planning process. The book describes the metropolis through its morphology, its socioeconomic profile, the way rich and the poor live, its built environment, mode of travel, and the administrative aspects of urban planning. This book is not only for town planners but also for the citizens of Delhi, with the intention of making them more aware and enlightened about urban planning and urban governance. Urban planning is making decisions that profoundly affect the form and character of Delhi metropolis, in which its citizens live and the manner of their lives.

The industrialization of the urban food system, alongside the proliferation of supermarkets, has dramatically transformed the landscape of food accessibility in cities. In many countries, the spatial consolidation of food provisioning has deprived many urban neighbourhoods of easy access to food, particularly foodstuffs integral to a healthy diet. These often socioeconomically disadvantaged urban areas are referred to as "food deserts". However, studies of urban food deserts in cities of the Global South are sparse, given their complicated urban food systems with the strong presence of informal food economies and diverse food sources. This book draws on empirical studies from South African, Brazilian and Chinese cities to investigate the food desert narrative, the characteristics of urban food environment and the various socioeconomic factors shaping it, as well as the food security and health consequences of urban food deserts. These studies reveal the limitations of applying the food desert concept to cities in the Global South and call for more holistic measurements of urban food insecurity.

"A journalist travels the world and investigates current socioeconomic theories of happiness to discover why most modern cities are designed to make us miserable, what we can do to change this, and why we have more to learn from poor cities than from prosperous ones"--

When Jesus asked us to feed the hungry, give drink to the thirsty, and visit the imprisoned, he didn't mean it literally, right? Kerry Weber, a modern, young, single woman in New York City sets out to see if she can practice the Corporal Works of Mercy in an authentic, personal, meaningful manner while maintaining a full, robust, regular life. Weber, a lay Catholic, explores the Works of Mercy in the real world, with a gut-level honesty and transparency that people of urban, country, and suburban locales alike can relate to. Mercy in the City is for anyone who is struggling to live in a meaningful, merciful way amid the pressures of "real life." For those who feel they are already overscheduled and too busy, for those who assume that they are not "religious enough" to practice the Works of Mercy, for those who worry that they are alone in their efforts to live an authentic life, Mercy in the City proves that by living as people for others, we learn to connect as people of faith.

In Food City, a companion piece to Smartcities and Eco-Warriors, innovative architect and urban designer CJ Lim explores the issue of urban transformation and how the creation, storage and distribution of food has been and can again become a construct for the practice of everyday life. Food City investigates the reinstatement of food at the core of national and local governance -- how it can be a driver to restructure employment, education, transport, tax, health, culture, communities, and the justice system, re-evaluating how the city functions as a spatial and political entity. Global in scope, Food City first addresses the frameworks of over 25 international cities through the medium of food and how the city is governed. It then provides a case study through drawings, models, and text, exploring how a secondary infrastructure could function as a living environmental and food system operating as a sustainable stratum over the city of London. This case study raises serious questions about the priorities of our governing bodies, using architectural relationships to reframe the spaces of food consumption and production, analyzed through historical precedent, function and form. This study of the integration of food, architecture, and the development of future cities will both inspire and stimulate professionals and students in the fields of urban design and architecture.

This popular text mixes classic theory and research on urban politics with the most recent developments and data in urban and metropolitan affairs. Its balanced and realistic approach helps students understand the nature of urban politics and the difficulty of finding effective "solutions" in a suburban and global age. The ninth edition has been thoroughly rewritten and updated with a continued focus on economic development and race, plus renewed attention to globalization, gentrification, and changing demographics. Boxed case studies of prominent recent and current urban development efforts provide material for class discussion, and concluding material demonstrates the tradeoff between more "ideal" and more "pragmatic" urban politics. Key changes in this edition include: Every chapter has been thoroughly updated and rewritten. The Ninth Edition reflects the most current census data and the newest trends in such areas as the "new immigration," suburbanization, gentrification, and big-city revivals; There is coverage of the big-city pension crisis and politics in Stockton, Detroit, and other cities facing possible bankruptcy; A brand-new opening chapter introduces the concepts of the Global City, the Entertainment City, and the Bankrupt City; New photos and boxes appear throughout the book; Increased coverage of policies for sustainable urban development.
