Fearing that their new riding instructor is in serious financial difficulty and that Pine Hollow Stables will be lost, the Saddle Club goes into action to drum up new business and to arrange a riding show.

They call me Friday. It has been foretold that on a Saturday I will drown ... Friday Brown was saved by Silence. Brought up travelling the endless roads of the Australian wilds, Friday's past was shaped by stories, told dreamily by her mother around glowing campfires and on the edge of endless plains. But her mother's death left Friday lost, and running from a family curse that may or may not be real. Desperate and alone in the middle of a strange city, a voiceless boy with white-blond hair and silver eyes appeared from nowhere, stole her heart and took her home. Friday is welcomed by a strange gang of lost kids and runaways. Led by the beautiful but fearsome Arden, the group live an underground life in the city, begging, stealing and performing to keep themselves alive. But when Silence returns to the house covered in someone else's blood and terrified, the gang escape to an outback ghost town, leaving everything behind. Murungal Creek is abandoned, desolate and full of empty promises. Life in Arden's gang starts to unravel, and the anger, lies and deceit that have been hidden for so long start to float to the surface. Having been swept along by the currents of life for as long as she can remember, Friday suddenly finds herself struggling to stay afloat, and alive. As devastation threatens, Friday must face up to her past, and fight, for the first time in her life. From the winner of the Adelaide Festival Award for Literature, 2012, FRIDAY BROWN is a remarkable story, described by the Weekend Australian as a story with 'characters so palpable you can imagine passing them in the street.'

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Mark Kurlansky's first global food history since the bestselling Cod and Salt; the fascinating cultural, economic, and culinary story of milk and all things dairy--with recipes throughout. According to the Greek creation myth, we are so much spilt milk; a splatter of the goddess Hera's breast milk became our galaxy, the Milky Way. But while mother's milk may be the essence of nourishment, it is the milk of other mammals that humans have cultivated ever since the domestication of animals more than 10,000 years ago, originally as a source of cheese, yogurt, kefir, and all manner of edible innovations that rendered lactose digestible, and then, when genetic mutation made some of us lactose-tolerant, milk itself. Before the industrial revolution, it was common for families to keep dairy cows and produce their own milk. But during the nineteenth century mass production and urbanization made milk safety a leading issue of the day, with milk-borne illnesses a common cause of death. Pasteurization slowly became a legislative matter. And today milk is a test case in the most pressing issues in food politics, from industrial farming and animal rights to GMOs, the locavore movement, and advocates for raw milk, who controversially reject pasteurization. Profoundly intertwined with human civilization, milk has a compelling and a surprisingly global story to tell, and historian Mark Kurlansky is the perfect person to tell it. Tracing the liquid's diverse history from antiquity to the present, he details its curious and crucial role in cultural evolution, religion, nutrition, politics, and economics.

Pretty, flighty Daisy Devreaux can either go to jail or marry the mystery man her father has chosen for her. Arranged marriages don't happen in the modern world, so how did the irrepressible Daisy find herself in this fix? Alex Markov, as humorless as he is deadly handsome, has no intention of playing the loving bridegroom to a spoiled little feather-head with champagne tastes. He drags Daisy from her uptown life to a broken down traveling circus and sets out to tame her to his ways. But this man without a soul has met his match in a woman who's nothing but heart. Before long, passion will send them flying sky high without a safety net... risking it all in search of a love that will last forever.
