UNIX / LINUX Tutorial - Tutorialspoint

In computing, a shell is a computer program which exposes an operating system's services to a human user or other program. In general, operating system shells use either a command-line interface (CLI) or graphical user interface (GUI), depending on a computer's role and particular operation. It is named a shell because it is the outermost layer around the operating system.

Shell Programming and Scripting - UNIX and Linux Forums

The UNIX operating system consists of three parts - a) the kernel, b) the shell and c) the programs. The kernel of UNIX is the hub of the operating system: it allocates time and memory to programs and handles the filestore and communications in response to system calls. The shell acts as an interface between the user and the kernel.
